

1406

Visit to The Mother Church. The First
1906 Church of Christ, Scientist in Boston. Mass
June 10 Dedication -

The Church is gigantic, seating, under the
left dome, five thousand people. It cost
two million dollars. I think it is handsome.
It was impressive to see that large number of
people gathered together under the high roof.
On either side of the large platform where the
readers sit is a very large white tablet. On
one is engraved a scriptural quotation signed
with the word 'Jesus Christ'. On the other
is the following:-

If sin makes sinners
Truth and Love
Can unmake them
If a sense of disease
Produces suffering
And a sense of ease
Cures it
Disease is mental
Hence the fact
In Christian Science
That the Christian mind
Alone suffers
And the Divine mind
Alone heals it

July 20

To Shelburne N.H.
Visit to Mr & Mrs. G. W. MacMillan -

In the morning I took the 9 A.M. train at the North Station for Exeter, New Hampshire to visit Mr & Mrs. Gilbert W. MacMillan. We had a pleasant but rather warm ride. A ditch by the railroad track north of Portland was yellow with Utricularia and Utricularia repens. We reached Exeter at about 5:20 P.M. and found Mr. & Mrs. MacMillan and the automobile, and a hearty welcome.

A ride of $\frac{3}{2}$ miles to the house was most refreshing. The sky was cloudy and the air delicious. The flooding of the Charles Riverbank and the MacMillans meadow is sad. We saw from the train as we passed Leadville Bridge Stains made by the numbered cutting on the page.
The great change wrought by the Berlin Electric Co. The dam is built and the first power house completed.

Arriving at the house we spent a most delightful hour sitting on the piazza. We were introduced to the monkey a little fellow from South America that Mr. MacMillan bought in Detroit (*Cebus* sp.).

Since the 17th July Mrs. MacMillan has seen my Otocoris day a Prairie Horned Lark & young one. They come a nesting regularly to a open patch some with oats by the piazza. It is a sandy strip with sand, and scattered short green oat blades and as we sat close by, only 25 ft away, I was overjoyed to see the adult bird come and run about feeding. With Mrs. MacMillan here I had a perfect view of it in every detail. It stretched up its head constantly.

Sturbridge, N.H.

1906

July 21

Cloudy but pleasant. Thunder storm in middle morning and rain till about 5 P.M.

This morning Mr. Macmillan, Ellen & I rode in the auto to Gorham and brought back Mr. Charles Rantoul who drove from the house to Philbrook.

As we were on the piazza this morning about noon I saw, twice, the female Prairie Horned Lark in the oat patch by the house. This, as we found out later, is the bird ^{Otocoris a.} ~~that~~ ^{that} Mrs. Macmillan has seen heretofore. In the afternoon as it still rained some, we sat on the piazza and between about 4.30 & 5.15 we saw three Larks, a male and a female adult and one immature. During all the time two birds were visible about 46^(7 p.m.) feet away and once for some 10 minutes all three birds were close together. The markings were very clearly distinguished, and the male & female were strikingly different. The black, white and yellowish lines and patches about the head were clearly noted the female's markings being subdued. The young bird was much smaller with mottled plumage. The line over the eye was whitish and on the breast there was an indication of the black line. They walked about feeding on the oats that had been scattered over the ground. It was a most fascinating sight. Finally all three birds flew away uttering melodious sounds.

Autos to the beach near Bridge before tea -

Shelburne, N.H.

July 22

Sunny with scattered clouds. mountains
hazy, hot - Sunday -

We spent the morning on the piazza
as it has been pretty warm -

Mrs Charlotte Peirce arrived last night. The train
due at Sorrell at 11:45 was two hours late
and Mr & Mrs. Macmillan & Miss Peirce arrived
home in the automobile at about 2:30 A.M.

This morning about twelve o'clock the Otocoris
male Prairie Horned Lark appeared on the a. praticola
'Lark Promenade' and I watched him
with Mrs. Macmillan's binoculars for a
full half hour. He is a handsome bird.
Resper and Field Sparrows are constantly
heard near the house.

This afternoon Mr. & Mrs. Macmillan,
Ellen & I automobile down to Bluffbank's
where I called on the various people.
Mr. & Mrs. Charles & Endicott Bentall at the
Emerton cottage, Miss Fanny, Anna, Mayjorie
Lawrence, Ethel. Saw Rob & James
Greenough. Gus was away - Returning
we went to the village where I saw the
ruins of the Hibbard House and Morris's
house - They are completely gone -

After supper Mrs called with Rob
& Laura Greenough & a friend -

1906

July 23

Rain early A.M. clearing but cloudy - Warm, air
fresh -

This morning before breakfast Mrs. MacMillan & ^{young} Brown a
I saw the young Prairie Horned Lark in the ~~native~~
drive-way near the house - In a moment the
female bird alighted beside it and, I think,
fed it. Soon both flew away - This was about 8.15.
About the middle of the morning, the male bird came
to the 'Lark penance' and I watched it for a full
half hour from about eleven yards -

Later Mr. MacMillan & I rode to Gorham in the auto-
and as it was raining some we wore the rubber
coats that he has with the machine - They tie round
the neck, after being drawn over the head, and there is an
elastic round the wrists - You are absolutely dry -

After dinner we all, excepting me, wheeled to Gorham County Circus
and went to the Circus (Wheeler's) a typical country
circus in a tent in an open field. It was a
small affair, very enjoyable, and there were very
good simple acts performed - Returning home
Mr. MacMillan, Miss Peirce, Ellen & I wheeled over
Feltburne Bridge and round over Shelburne
Bridge home - It was a lovely ride -

This evening I dissected and made a diagram
of a flower & fruit of Polygala polygama that
Ruthven sent me for a name from Scarborough
Beach line. Mrs. MacMillan & I went over some
plants collected by her last year & this -

Before supper Mrs. Mac & I walked over the fields
to find 'fairy rings'. Black flies are still here.

Shelburne, N.H.

1906

July 24

Cloudy, with occasional sun. delicious breeze, cool.

This morning Mr & Mrs Macmillan, Miss Peirce Auto ride and I took an automobile ride to Bethel on the Bethel-south side of the river, crossing the bridge there 45 miles and returning on the north side, crossing Shelburne bridge on the way back. The distance was 40 miles, the time $2\frac{1}{2}$ hours, the rate, 18 miles an hour. It was a glorious ride, with such beautiful views and cool woods.

After dinner, Mr. M., Miss Peirce & I auto'd to Gorham and on the return Mrs. M., Mrs. P. & I walked back into the woods to gather some edible fungi for supper. While in the woods I heard a clear, sharp, incisive kak-kak-kak-Cooper's kak-kak uttered two or three times. Mrs. Macmillan Hawk? soon saw a Hawk of considerable size fly low over the trees nearby, and as we listened, a few, peculiar rather low, indescribable notes were heard. Soon after which, the bird flew through a small opening in the woods uttering the same loud cries. This time I saw it. It was as large as a female Cooper's Hawk and had a very long tail. Its general color, as nearly as I can make out was brownish. I shall write Bill Brewster about it - We picked up two feathers in the wood where the Hawk was which probably belong to bird.

Shelburne, N.H.

1906

July 25

Clear, cool, brilliant day -

I presume it was on account of a considerable jolting in the hind seat of the automobile that unfortunately brought on the old pain - I felt it some Monday afternoon and more Tuesday afternoon - I woke up in the night, last night and had considerable pain and could not sleep after about three o'clock - I slept in bed this morning with intervals of pain, but got up at noon and have been free ever since - I spent the afternoon on the piazza, reading and talking - I trust I am over with it. There is a good deal of difference on the back or front seat of the automobile.

The evening has been as clear as crystal and the constellations are brilliant. Miss Colburn, visiting Mrs. Bentall (Mrs. Charles Bentall) in the Emerson Cottage took tea there and spent the evening - Mrs. Macmillan with her wife days in the automobile

1906

Shelburne, N.H.

July 26

Sunny and cloudy, cool breeze -

I awoke up after a sound sleep, much refreshed and feeling nearly over my trouble. We spent the morning on or near the piazza, taking it easy. I took a number of snaps of the monkey and hope some of them will be good. He is never still whether in his cage or not. He is loose a good deal, running about by the house.

This afternoon Mr. Macmillan, Miss Pearce & I rode in the car to Gorham - I sat on the front seat and it was very easy and delightful.

This morning I saw a Broad-winged Hawk soaring over the field by the house. It came very near. I have seen one Gray and two Red Finches since I have been here.

Miss Colburn visiting her Charles Rantoul in the Emerson Cottage at Philbrick's took tea here this evening. The auto took her both ways.

1906

July 27

Shelburne, N.H.

Clear, warm, glorious day -

This morning, after breakfast, I walked down to Leedmine Bridge and took a number of photographs of all the songs since last year. Mr. Macmillan called for me in the automobile and with Mrs. Macmillan & Miss Pearce we rode to Gorham, over Gorham Hill, past the Ravine House and went to Jefferson Highlands, where the Cherry Mt. road turns off. Here we turned and came back. Our ride was about forty miles.

Autos running
to Jefferson
Highlands.

We reached home to dinner. At Gorham we stopped at Libby & Son's Cos. built a white ~~tire~~ ^{tire} ~~and~~ ^{and} and I heard a House Wren in the trees ~~across~~ by the Peabody River near the buildings. It was a beautiful ride along those noble peaks.

This afternoon we erected an arch of spruce over the bridge crossing the West Branch of Rattle River near the barn. It was wrapped about with red, white and blue. Above in the center is hung an old automobile tire and in its center hangs a white label with A.A.A. in black letters for American Automobile Association. A little way from here by the road we have erected a big white canvas with the words; A.A.A. And Bretton Woods 40 miles away. The Glidden tourists pass by here to-morrow about noon on their way to Bretton Woods. We understand that some hundred automobiles will pass. We auto'd to Gorham this P.M. for red, white and blue bunting.

Shelburne, N.H.

1906

July 28

Cloudy and clear, cool, light breeze, glorious.

We have had a most enjoyable day on account of the Hidden tour. The cars left the Keenley Lakes this morning between seven & ten o'clock, bound for Bretton Woods, about 126 m. via Bethel, Shelburne, Enfield, Randolph, etc.

15 m. per hour is the limit and we were all stationed by the road near the barn. The old automobile was hauled out and a sign put up saying "An Early Bird". Cheers were brought out and Mrs. Rantoul, Miss Colburn & Endicott came over from Gilbrooks'. First the big automobile with baggage bundled up and then a large car containing three seats and seven men passed. They threw out confetti at the crossings to show the way. Shortly after 2 P.M. the tourists began to pass. They cheered the decorations and we toted & waved. About fifty cars passed, heavy, powerful machines filled with men and women - One or two stopped a second to photograph the arch - We ate our dinner party in the house basement and party on the roadside. The tourists were many by, by 3 P.M. and Mr. Macmillan, Mrs. Rantoul, Miss Peirce & I drove to Enfield. Saw some cars there near the marker's stand. The marker is stationed at certain towns and has a checking system.

Returning, we separated, Miss Peirce, Mr. & I walking down to the Bridge, Mr. M. taking the visitors home.

Shelburne, Vt.

1906

July 29

Clear and cloudy. Hot day. Temperature in 80°.

This morning Mr. & Mrs. Macmillan, Miss Pearce & I rode had a delightful ride to Milan through Enfield, Milan and Berlin. The total distance was about forty miles. In spite of the hot day the ride was as cool as could be. We followed the Androscoggin River and the views over the meadows to the mountains beyond were very beautiful. Immense numbers to We saw all the Swallows (Barn, Eave, Bank, Martin) excepting the Tree Swallow. I saw but one Martin, but the others were in immense numbers about barns and on the telegraph wires. There was one flock of nearly five hundred Eave Swallows and one of three or four hundred ~~Bank~~ Bank Martins. It being Sunday Berlin was quiet, but the immense mills with their piles of logs and the river choked with logs makes a wonderful sight - We accomplished the 40 miles in 2 1/4 hours and got home to our one o'clock dinner -

We staid about the house this afternoon, on the piazza and under the trees. At six o'clock Mr. & Mrs. Macmillan, Miss Pearce & I auto'd to the Emerson Cottage where we took tea with Mrs. Huntington and Miss Colburn. Miss Colburn told me of her experiences a year ago in Japan. She was in a large steamer, the Corea, bound for Nagasaki, Japan, and was but forty miles from the great naval fight at the time it took place when Admiral Togo smashed the entire Russian fleet.

We returned home about 9 o'clock -

St. Albans, Vt.

1906

July 30

Trip to Bretton Woods -

Snowy and sunny, cool, a glorious day -

We have had a splendid trip today in the automobile of seventy miles to Bretton Woods and return. Every moment has been exhilarating to the last degree, magnified mountain views rolling out before us every moment.

Our party, consisting of Mr. & Mrs. Macmillan, Miss Peirce and I, left the house at 9.50. We went through Gorham and at the upper Gorham station Miss Peirce arranged to have her trunk checked to Lisbon. Then we went on over Gorham Hill, past the Revere House and just before reaching the Highlands we dropped down into Jefferson Meadows and glided on, crossing Israel River, to Aben Mountain Station. The famous slide on God's Head is still very visible. I well remember when Fred flute and I walked up the slide to the top, the year after it occurred. Passing on and following the track of the Slidden carriage, we turned into the road that runs over the high ridge east of Cherry Mountain. It was through dense woods of northern growth. The road is good, but the brain made it bad in the ascent. Macmillan had to run the car alone about a third of a mile at the very top. The summit of the ridge is 2120 feet and the pitch very steep. Then Macmillan house is about 780 ft elevation so we do a good deal of uphill work. From the summit of the pass we glided down for six miles over a fine smooth road bordered by a dense growth of forest trees and shrubs in unbroken succession,

Shelburne, N.H.

1906 without a break. It was the most exquisite bit
July 30 of seeing. Reaching the White Mountain House

(2) we turned and following the bank of the Am-
monoosue River we passed the Fabian House en-
tirely given over to Jews and reached the Mt.
Pleasant House station at 12.20, two hours and a
half from home. We stood here till the 12.50
train left, taking Miss Pearce to Lisbon and bidding
her good bye we wheeled across the intervals an-
cross the river to "The Mount Washington". This
magnificent hotel is situated on an elevation
opposite the Mt Pleasant, and commands a most
magnificent view of the range of big mountains.
It vies in size and appointments with the best
Florida hotels. Its immense size, wood corri-
dors, handsome hall, and boulder ball room are
most imposing. Pictures with enormous panels of
plate glass affording fine views are everywhere,
and in front of one of these I sat at lunch.

At 2.30 P.M. we started off on our return go-
ing a half mile down the road to a garage for
gasoline. We took the road round Cherry Mt.
on the west side, avoiding the steep climb and
driving some ten miles to our route. For
several miles we descended along the bank of the
Ammonoosue River, admiring the water foaming
over the rocks. The view as we went round Cherry
Mt. was my opinion, overlooking Whitfield, Jefferson and
the encircling mountains, including Mt. Prospect &
Pleasant, Star King. Having completely cir-
cled the mountain we returned home over the old
route reaching the house at 5.15.

Shelburne, N.B.

1906

July 31

Sunny, with some cloud, breeze, warm in the sun.
No automobileing today for our run of yesterday ground the bearings of one wheel so that new ones were telegraphed for last night.

After breakfast Mr Macmillan & I walked down to the bridge and went through the big power house which is completely equipped with machinery ready to transmit electricity to Berlin. Mr Macmillan's suit against the party building the dam comes off in the fall. It is a long story. I am more interested in the result. His dam built before the big one at Leetown and started before the latter was decided upon is entirely flooded out and his low land permanently submerged. He claims the privileges of his own dam, and the restoration of his property. His beautiful island is cutting under water and every tree cut down.

Later in the morning, Mrs. Macmillan, Ellen & I walked up the slope of Mt. Evans for some distance, collecting mushrooms, examining plants and listening for birds which were very silent. We heard the Hawk again in the Cooper's same place as on the 27th last. This time Hawk? it was whining in a continued series of whines. I caught a glimpse of it as it flew from a tree over head.

This afternoon we sat in the piazza and talked. We go home to-morrow and I shall call this visit one of the very pleasant ones I have spent.

Shelburne, N.H. to Cambridge, Mass.

1906
Aug. 1

Pleasant, bright day

We left our good friends today. The automobile not being in repair, we drove to Shelburne station behind two horses, Mr. Macmillan and Eller going with us. Mrs. Macmillan waved us good bye from the piazza. The train came promptly at 8.30 and we reached Boston comfortably at 9.55 P.M., and home before five.

[I talked over with William Brewster today, [two his
August 3, the Hawks and feathers of
July 24 & 31. The bird of the 24th was
unquestionably an adult Circus cooperii
the note being very characteristic.
The bird of the 31st was a young bird
of the same species, the whining
note being equally characteristic of the
species. I tried to scrub the
feathers that we picked up in the
woods on the 24th, and they are,
most nearly matched by the secondaries
of the Cooper's Hawk and evidently
belong there, though in all the skins
we examined, of young and old birds,
there is some white in the inner webs,
less in the older birds. I have
written Mrs. Macmillan to try to
find some more feathers in the
same place.]

Accipiter velox

1906

Cambridge, Mass.

Aug. 14

The came today from Mrs. Macmillan, ^{a box} *Accipiter* containing two hawks shot in the woods on the ^{velix} slopes of Mt. Evans by Mr. Macmillan's man, John ^{in Shallowell, N.H.} on Aug. ^{not}. Mrs. Macmillan and her friend Miss Valentine skinned them. John shot another hawk on August 5 and Mrs. Macmillan was ^{interested} that she has preserved the wings & tail but they are not in the box.

Aug. 15

Bill Brewster and I examined the hawks this morning & they are an immature ♂ and ♀ *Accipiter velox*, full grown. Therefore the birds heard and briefly seen in the same wood by us on July 24 & 31 last must have been of the same species, the one on the 24th being an adult, as its note showed. The deductions I drew from the size and notes of the birds are undoubtedly wrong and it is quite certain that a family of Sharp-shinned Hawks only have been in the wood there. They may have come from some distance as Bill Brewster says that the young birds were old enough to fly a long way.

Shelburne, N.H.

1906

July 20-31

List of birds observed by me - They are all in
Shelburne unless otherwise stated, the exceptions
the results of driving about in the automobile.
The interesting birds are discussed in the text.
The early records of Otocoris are by Mrs. Macmillan

DEATH TAKES DETROITER WHO PLAYED AN ACTIVE PART IN CITY'S BUSINESS LIFE

HUGH M'MILLAN.

HUGH M'MILLAN PASSES AWAY

Detroit Capitalist Dies Peacefully Following Illness of One Week.

WAS CONNECTED WITH BIG LOCAL CONCERNS

Took Great Interest in Art and Quietly Promoted Work of Worthy Charities.

Hugh McMillan, brother of the late Senator James McMillan and uncle of William C. McMillan, died at his family residence, 491 Jefferson avenue, yesterday afternoon at 5 o'clock, following an attack of diabetes lasting since last Monday.

Mr. McMillan was taken ill in his office at the Union Trust building, and for the last week his end had been expected. The immediate members of the family were gathered about the sick bed when he breathed his last. The end was most peaceful.

The funeral will be held from the residence tomorrow afternoon at 2:30. Rev. A. H. Barr, of Jefferson Avenue Presbyterian church, will have charge of the services. The interment will be in the family vault in Elmwood cemetery.

Started as Railroad Clerk.

Hugh McMillan was born at Hamilton, Ont., in 1845, seven years after his brother James, the late senator, came into the world. Coming to Detroit in 1861, he became a clerk in the office of the Detroit & Milwaukee railway. Afterwards he became associated with his brother in the Michigan Car company and the Detroit Car Wheel company.

With the late senator, he founded the Fulton Iron & Engine works, being made secretary of that institution. He was also one of the founders of the Detroit club of which he was also secretary, and was secretary and treasurer of the Mackinaw & Marquette railway, organized in 1881.

Mr. McMillan early became interested in the Union church, and was one of the original members of that congregation. He was also one of the founders of the Commercial National bank, being its president until about four years ago.

In Many Business Enterprises.

In addition to these enterprises Mr. McMillan was a member of the executive committee of the Union Trust company; a director in Detroit & Buffalo Steamboat company; was for some years secret and treasurer of the Michigan Telephone company before its reorganization; vice-president of the Detroit Gasoline company, and Negroberry Furnace company; president and general manager of Detroit Iron Pipe & Foundry company; vice-president of the Detroit Marine company; transferred the Detroit & Cleveland Nickel company; president of the American Steamship company; president & treasurer of the National Steamer company; and president and treasurer of the Dunith & Atian Transportation company.

Leader in Red Cross Work.

Mr. McMillan was always great interested in art and was one of the supporters of the Art Museum. He was also a quiet, prominent in charitable work. Disliking notoriety, was careful to avoid it as much as possible, being publicly identified with philanthropic movements. The Michigan branch of the American Red Cross society was one exception to this rule. He was keenly interested in the Red Cross movement, and at the time of the San Francisco disaster expressed his regret that the people of Michigan do not take a greater interest, "as have a better understanding of the organization."

About ten years ago he married Miss Warfield, of Baltimore, Md., who, with two children, Maude and Gilbert, sons by his first wife, survived him.

Aug. 8

Trip to Readville, Mass.

Spent a delightful day with Dr. Kennedy going collecting and getting to the house by 11:45. He drove down to the station in the afternoon and met Mr. Charles E. Faxon who joined us. We had a quiet, pleasant talk and a most agreeable time at dinner. Mrs. Kennedy, Mildred & Sinclair joining us. Mildred gave us a good deal of entertainment with her Videl talking machine. Mrs. Faxon & I took the train home shortly after nine.

Trip to Readville, Mass.

Aug. 11

I have had another nice day with Dr. Kennedy. I reached the house at 9:45 and we took a long drive into the Blue Hill Reservation going between Blue Hill & Hancock Hill and along Hillside St. and Houghton Rd., going quite near Pnkapog Pond and finally by a fine piece of State road to Custer Ave which we followed to Blue Hill Ave. & Brush Hill Road and home. The woods and stretches of water are beautiful. Mrs. Hal Kennedy and Mildred with two girl friends were at lunch. The Doctor & I spent the afternoon on the piazza and under the trees, talking. Sinclair was home to dinner. I took the train home about 9:23.

Trip w Nahant, Mass.

1906

Aug. 13

clear, breezy, cool -

In. & I took the 2.20 P.M. boat, the Adelaide, at the wharf on Battery St. this afternoon and had a most refreshing sail to Nahant, stopping first at Bass Point. We did not leave the steamer and got back to Boston a few minutes before 5 P.M.

The clear blue water, fresh breeze, the many craft of all kinds going in every direction made the trip most enjoyable in every way. The big field in Deer Island is most exquisitely green and work is going on on the top. The U.S. Corps on the island and are making some military works. The boat took the outer passage going between Forts Sumter & Independence, and outside of Deer Island. Bass Point where the boat stopped first is a sort of River Beach, with dance halls, eating places and cheap attractions, with fine high rocks. The wharf at Nahant is farther out and near the older residential portion. I made three snap exposures on the way -

1906

Aug. 14

Walk to Hiddleston Falls, Mass.

Clear, comfortable breeze, rather warm in sun.

Dr. Kennedy & I met this morning at the North Station and took the 9.25 train to Wyoming. From there we walked to the Falls, and on to Stoneham, about three miles or so. We strolled slowly along enjoying everything. As we drew near the Falls, I saw many dead pines killed by the moths. A large pile of pine logs by the road showed the results of their depredations. Wyoming Avenue took us to Spot Pond and on to the Supt's house where we met Mr. Price who is in charge. He had a most interesting time seeing his collection of live birds and animals. These include Mallard, Pintail, hood duck, Mandarin, Canada Geese, Golden and Silver Pheasant, Quail, a brood of chicks Quail with the hen that was raising them, 2 Badgers, Porcupine and several in confinement, Lynx, Red Foxes, Bear, formerly owned by L. M. Underwood. From there we walked to Stoneham, lunching by the Pond, visiting Dolefall Road near by and finding a large patch of *Cyperus tuberosa*. It was a common plant in field and by the road between the Reservation & Stoneham. At Stoneham we took the electrics to Winchester where we got out for a while. I saw and photographed a very interesting Episodal cleidoc in Winchester. It was a plain brick, without cover, on Cleidoc St. Then we took the cars to Arlington & home, parking at Harvard Square - I took some bits of flowering *Hedysarum*, *Celtis*, *Cynophorus* by the roadside in the Falls on Wyoming Avenue -

1906

Trips to City Point, Boston (S.)

Aug. 15

Clear, fresh, cool -

This morning I took Mrs. Brewster's horse and carriage and drove Dr. Thos. Codman and Miss Brown around Fresh Pond. All enjoyed it very much.

This afternoon I took the electric, alone, for City Point. It takes 50 minutes from Harvard Square. The Point covers a large area, and is a fine, fresh open, healthy breathing place for the people, who resort there in crowds -

The beach of the long pier that runs out at least a fifth of a mile in the harbor, was covered with people sitting in the sand. The water was clear and blue. I took a picture of the crowd. Then I took a small launch and plied between City Point and Castle Island and had a pleasant sail of a few minutes. Fort Independence is on the island. It is no longer a government fort, but the island is now a part of the parkway system. There is a superb view from the slopes at the fort of the old fort over the harbor. I took a few pictures of the fort and the old cannon. A long, very broad bridge connects the island with the mainland and I returned over it and took the car home. The whole trip was about $3\frac{1}{4}$ hours. I had one hour at the Point.

I found on the ramparts near the fort a clump of about 1 $\frac{1}{2}$ feet across, in full flower. I took home a few stems of it to open.

Cambridge Mass.

1906

Aug. 22

Today is E. L. Rand's birthday - He was born on August 22, 1859. I sent him a small book, 'Pigs in Pigs', a most amusing short story. This evening Mr. & I went over to his house. Dr. S. L. Robinson went too and we met Mr. & Mrs. Rand and their daughter from the neighboring house. Mrs. Edward Rand brought on a birthday cake, bordered by flowers and with a pattern in the center, thus: ☺. This is called

We had ice cream and cake and a most enjoyable time. Dr. Robinson has come down from Jeffrey and will be here a number of days at the Herbarium.

Aug. 24-27

Charlie arrived here from Chicago ~~the~~^{Friday} P.M. at shortly after six and staid with us till Monday morning when he left for Mid-stone neck. Sunday afternoon he & I took the electric to Newton and then to Nonnenberg Park via Beacon & Waltham. After inspecting the animals we rode back to Chestnut Hill Reservoir and Brookline and home over Harvard Bridge. We had a fine view of the Harvard Medical Bldgs. I took bus, Carlisle to ride on Frd., the 24th, to see the same bldgs.

Dr. S. L. Robinson has breakfasted & dined with us on the 23^d, 24th & 25th -

1906

Aug. 29

Clear, cool, refreshing day.

In. o'g took the 4.15 P.M. train at the North Station for The Elms to visit our cousin - Robert W. Lord came down with us, we reached The Elms almost exactly on time a few minutes before seven o'clock - George ~~Long~~ was at the station to meet us. It was a beautiful light as we drove to the house. The sun had set and the western clouds were crimson in color with pearls sparkling in the moist air we looked at this light over the marshes five or six night Herons soared over us in the dim light headed for the marshes to feed in the night. A Whippoorwill sang near by. We received a warm welcome. The household consists of Count Marin Massi, Robert, George, Marion & Rogers, Charles' children - Mrs. George Hewell who has been here all summer was still here, though she is going to married morning. I was very glad to see her after so many years. She had a pleasant evening.

Ellsworth, Maine

1906

Aug. 30

Fog in early A.M., clearing - clear, cool day

This morning, Marion & I walked down to the beach. It is all as beautiful as ever. Various kinds of butterflies were fluttering over the pastures and trees of clover, Clouded Sulphur, Cabbage Butterfly, Peacock Fritillary, American Copper, Great Spangled Fritillary, Viceroy & Brintesia sp.

Flocks of Herring Gulls with an occasional Black Back were on the beach especially at the mouth of the river. Terns were abundant. We got very close to a flock of about seventy that were sitting on the beach and with my glass I could easily distinguish the rusty bills with black tip. I presume that all were Wilson's Terns. Pelicans were here & there on the beach & flats. We got so close to one Cattle fellow as to make it out perfectly to be the Least Sandpiper. Three birds on the sand flats back of the beach seemed to be Dunlins. One of them [I am sure of them] had coal black under parts below the heart, and some black about the head. We got home to dinner.

This afternoon Deb, me & I walked through the woods and round the immense field of corn where I saw two Streakies. We saw the young cows, and the Yorkshires, one of whom has had a litter of 19 pgs. Safety & Bell's Light are still here.

This evening I saw the veterinary test some cows for tuberculosis.

Elms, June -

, 1904

Aug. 81

clear, cool, reflecting sun & breeze -

This morning we strolled about the house.

In afternoon Marion, Rogers & I took a walk. We went down to the mouth of the river where the tide was very low. On the sand flats in the same as yesterday.

I saw the three birds that I thought were ~~Dunlins~~. I saw them no better than before and am not sure about them. We then walked over to the beach. Gulls & Terns (all presumably Hirundo) were flying over the water or sitting on the beach. I saw what must have been an immature Black Back, a large brown fellow, looking twice the size of the Gulls that accompanied it.

As we walked along the beach we saw in ^{the water} the water close in & saw three Terns. I ^{in the water} thought at first that they might be sleeping birds, but Rogers who ran ashore found that they were dead birds shot by some nutless poacher and left behind. Rogers quickly doffed his shoes & stockings and brought the birds ashore with an empty cartridge that was floating nearby. We studied the birds later. Two are Common or Noddy Terns (Sterna Hirundo). The bills are rusty with black or blackish tips. The forward parts of the heads were turned white, and a few feathers were coming up among the black ones on the head. The third bird is, I feel sure a young Noddy. The

Ebens, Maine

1906

(Aug. 31) characters are all right, but the bill is entirely black - Hoffmann in his work on his English bird says (partly). - He may have taken his description from a sand specimen - The breast was quite white. [Sternus
littoralis
Tide & Brunn
Nov. 2, 1906]

I shall keep the head and wings ~
be found on the beach near the water or
small fish that I am sure the terns eat as their chief food. I add a sketch from the
specimen that lies before me: natural size.

~~(2)~~

We returned over the flat again, taking the terns with us. I took back with me some curlew shells that we found in the sand at the mouth of the river. I analyzed the birds before supper. I saw today additional Butterflies, *Butterflies*, *Brachylophus myrina* & *ellona*, *Clunia plexippus*, *Euvanessa antispa*, *Cercyonis oregon*.

Eclips, Maine

1906

Sept. 1

Clear, windy from the land, almost cold,
but not refreshing -

This morning the first thing I did was to skinning
make a skin of the Tern with a black bill. I am Tern!
haven't done such a thing since I was a boy, but
I want to know just what the bird is. The
bill is pure black. I also preserved the head,
wings, tail & legs of the other two, both Wilson's
Terns. I have stuck everything on to a board
and they will dry all right for verification.

This took me some time, and later I went over
to the field in front of the house with Marin
and photographed the field full of bay oysters.
Marin & Baxter (dog) sat at one end, and
Rogers & Reedy (dog) at another. At the
summer house we found the rest of the harvested
setting. I photographed Rogers walking on the
railing - I saw some Black Swallow Tails Butterflies
and Druce's sp., different from the one of the 30th
so I have seen and Brenthes myrina & bella.

This afternoon Rose, Graye, Rogers & I drove
over to Kennebunk. On the turnpike, while
an electric road is under way - We
left Rose at Kennebunk to go canoeing on
the river (Kennebunk) and drove home -

Later Rogers and I walked down to the Great Blue
boat house on Little River. Here a fine sight Herons.
awaited us - Looking over the marsh from
the elevation with an old seat on it, I
saw five Great Blue Herons standing a
short distance from each other, engaged in

Eelus, Maine

1906

Sept. 1

(2)

fishing - clear glasses brought the noble birds close up, for they were only about two hundred yards away - We watched them for a long time - When fishing they stood motionless with head bent forward, intently watching:

 At intervals the bill was darted down with great rapidity and we imagined a small fish going down the long throat - They were constantly on the alert, raising erect the long neck, and looking and listening:

 At times one would stalk in a dignified manner to change its position, and another would raise its wings and with their assistance walk rapidly in a dancing fashion for a short distance - After an interval of watching we saw three more Herons sailing over the marsh to join their fellows - They all alighted near by, but just out of sight on the bank of the river. Soon one rose, flew over and joined the ones that were fishing.

I have described before the method of alighting. In flying the bird carries its legs stretched out straight behind - As it nears the spot where it is going to alight, it drops its legs and just as it reaches the ground, it spreads them and extends them at quite an angle in front, so that as it alights, the forward movement of the body, brings it upward -

 After a while another Heron joined the group. There were two adults in the flock, we watched them for some minutes, when

Ebens, Maine

1906

Sept. 1 (3) they all rose and alighted just out of my sight by the river bank. Altogether it was a very fine sight. The adults were very handsome, with their black crowns and blue wings.

A Kingfisher flew rattling over the wire several times as we watched the Herons, and the Marsh Hawks soared over the marshes. We walked through the wood, and saw much Tufted Reed in damp places.

Gentiana lutea was very abundant in one place. As we were returning to the house on the crest to the west, I noticed two or three Night Hawks flying over to the south, feeding as they went. Some we conscious of more and more, and the air seemed filled with them, scaling and feeding, but moving slowly. A rough count made at least one hundred of them.

They were scattered over a considerable area and while most of them passed on, a good number seemed to remain apparently over the marshes of Little River, feeding. It was a splendid sight. This was a migrating flock about which I have read.

At least ten Blue Herons flew by a over us as we returned home.

We found a Star-nosed Mole dead in the road this afternoon. I took it home to skin —

92

Elans, Maine -

1906

Sept. 2 - Clear, cold morning fresh breeze from the sea.
clouding up in the afternoon.

This morning Mr. & I with Sage, Marin Trip as
out Rogers went on the river in the boat. The the river
tide was high and we rowed up some way
above the bridge. The marshes were looking
beautiful, and every two or three minutes
we started a small Sandpiper that rose
from the bank and flew peeping over the
water, with bowed wings. Sometimes the bird
would rise ten or fifteen feet and screech down
to the bank farther on. It showed a good deal
of activity in flying. He saw quite a number
of them. They must have been scattered along
the river bank where it runs through the
salt marsh. I shall go again to make
out the species. It must be either a
Spoonbill or a Solitary Sandpiper.

Returning to the boathouse we walked through
the woods and met the rest of the household.
Mr. & I walked back through the woods -

This afternoon Rob, Marin & I walked some 3 miles across to the Drake Island road over the Dyke where we saw a Kingfisher, on Drake Island where I saw the Sassafras flourishing in its old place a few rods from the road (I did not go in to see it nearer) and on to the beach where we visited a wreck of last March, and then walked along the beach and home.

Saw about 15

(On the river this morning we saw a Great Blue Heron alight in water and flew off as we approached. This P.M. on the beach, I saw a Peep so we know that its black legs and parts webbed toes are prominent. When it was

Sea-Gulls of Manhattan
By Henry van Dyke
Scribner's Magazine
Vol. XL, No. 2 - August, 1906.

Children of the elemental mother,
Born upon some lonely island shore
Where the sunlit ripples run and whisper,
Where the storm-tossed billows plunge and roar;
Long-winged, tireless roamers and adventurers,
Fearless breathers of the wind and sea,
In the far-off solitary places
I have seen you floating wild and free!

Here the high-built cities rise around you;
Here the cliffs that tower east and west,
Honeycombed with human habitations,
Have no hiding for the sea-bird's nest:
Here the river is befined and troubled;
Here the burning, panting vessels fume,
Restless, up and down the watery highway,
While a thousand chimneys vomit gloom.

Toll and tumult, conflict and confusion,
Clank and clamor of the vast machine
Human hands have built for human bondage—
Yet amid it all you float serene;
Circling, soaring, sailing, swooping lightly
Down to glean your harvest from the wave,
Drifting at your ease across the harbor,—
You have kept the freedom Nature gave.

Even so the wild-woods of Manhattan
Saw you wheeling flocks of white and gray;
Even so you circled, sailed, and floated
Round the Half Moon creeping up the bay;
Even so your beaded eyes were listening,
While you fluttered o'er the tidal rips,
Screaming with your thin and tremulous voices
Round the sullen British prison-ships.

Children of the elemental mother,
Fearless floaters 'mid the double blue,
From the crowded boats that cross the ferries
May a longing heart grieve not to you,
Though the cities climb and close around us,
Something tells us that our souls are free,
While the sea-gulls fly above the harbor,
While the river flows to meet the sea!

36

Elms, Maine

1906

Sept. 2 This evening between nine and ten o'clock Fairly
(2) the moon was shining so brilliantly over water & the
the water that K B & I walked down to the beach.
beach. There was no dew and the grass
was as dry to the very edge of the beach
as on a warm midday. It was very
light and as we reached the summer-
house on the plateau we had a glorious
view over the marshes and ocean with
its sparkling waters. We kept on to the
bath house and found the tide nearly
full, the waves breaking but a few rods
below the beach grass. It was a most im-
pressive scene. The vast expanse of
ocean with the broad moon-lit way
stretching before us, the waves breaking on
the sand and tossing the pearly drops
of water in a mass of silvery foam,
the long extent of beach and, above, the
heavens with light fleecy clouds about
the dear moon made a never-to-be-
forgotten spectacle. We walked some
way along the beach and sat by the
bath house watching. A balm breeze was
blowing and the air was mild. As we
walked back we started a light hawk
from the ground at our feet on the pasture
between the summer house and the gate. It
rose and darted about up & down disap-
pearing in the gloom. I could see its
pointed wings. —

Ellsworth, Maine

1904

Sept 3

Rainy morning clearing at noon - A sharp
short shower in the afternoon -

I spent the morning in the house writing. Howard
Mr. Goodwin brought me a wounded Kite Hawk ^{Kite Hawk}
that he had picked up near the house. It
was evidently a young bird. One wing was
badly shattered by some cruel gunner that
left the bird - I examined its large
mouth and the white markings on the
wings -

The afternoon R. B., M. & I walked down
to the beach and as far as the creek.
I saw two flocks of White-winged Scotts
8 or 10 in each flock - Terns were very abun-
dant, fishing, and off the mouth of Pells
River on the banks hundreds were sitting. Gulls
were very numerous - A seal was
swimming close in shore and after
the sun had set several Great Blue -
Herons flew over our heads low down from
over the Little River marshes. I started
a Green Heron from the marsh back of
the boat house. It flew over to some
dense shrubbery back of the beach where
it disappeared - Peep and Sandpipers
were on the beach.

We have a Horus now -

At about 10:30 this evening, Marin's friend
Eustice Jameson arrived to stay a few days.
George drove over to Kennebunk for bee -

1906

Sept 4

Ellsworth, Maine

Clear as crystal, very cool, breeze from N.W.

This morning Mr. Marin, Corinth Johnson & I walked down to the mouth of the river - the tide was pretty well in. I walked out over the marsh and found in a small pool six *Yellowlegs*, four of them melanoleucus, and two, *flavipes*. - ^{Greater & Lesser} *Yellowlegs*. I watched some time. Finally they flew off uttering the familiar when-when-when-. Rough, one of the dogs, jumped into the river and caught and killed a muskrat that was swimming by. She brought it up on to the bank. When we returned I walked by myself down to the boathouse. Fleaze seems a great scarcity of birds away from the shore.

This afternoon, Mr. J. G. walked up the beach back of to the wreck. Marin, Corinth and a friend Marin & ^{the} Rising Sun. Did joined us and I took several pictures Boston of the vessel, the "Rising Sun, Boston".

Mr. Taylor this evening told me the story of the wreck. Last March the schooner started from Rockland, with 1100 barrels of lime, bound for Boston. There were on board the crew of three men, and a man and two women who got aboard at Portland and were going as far as Portsmouth. The vessel left Portland under a clear sky and fine weather. As they proceeded on their way, a storm set in, darkness came on, and the waves began to break on to the deck where were about 125 barrels of lime. The lime began

Eldon, Maine

1706

Sept. 4 to slack and steam. In the midst of the (2) driving sleet, one of the women held a lantern while the men threw the barrel overboard. Then they found that some the time in the hold was slackening and they tried in vain to bank it. With the steam pouring up, the captain saw that the flame was up and that they must get ashore as quick as they could. He had no idea just where he was whether off sand or cliffs, but he headed for the land. As the vessel passed over one of the reefs off the beach, her rudder was unshipped and the they trimmed her as well as they could with the sails. The tide was well in and providence favored the desperate crew and passengers who were hanging between life and death, for the schooner ran straight up on the sandy beach a little north of the mouth of Bell's River and but a very short distance south of Fords Beach. The vessel stood the pounding of the sea, and when the tide went down, the wet and shivering occupants got on to the beach and broke into a small summer house close by the shelter. Mr. Taylor got news of the wreck in the early morning and he immediately drove down to the scene. There were about

Ebens, Maine

1906

Sept. 4 six inches of slush on the ground and the
 (4) storm was still beating in. When he reached
 the scene of the disaster, he said that a
 most wonderful sight met his eyes - The
 vessel was lying intact on the sand and
 from all parts of it steam was pouring
 out. He took the women home and dried
 their wet clothes and warmed and fed
 the poor creatures. After a while they
 were able to take the train away.

When the first tide came in, Mr. Taylor
 went to the wreck. Previous to this the
 captain even thought he could float her
 off. The ship was lying on her keel, and
 as the big waves struck her, she rolled
 first on one side and then on the other,
 wearing a deeper and deeper bed for herself.
 Steam enveloped the whole vessel and
 she floated off with every wave that
 struck. The next was bearing more
 and more, and the stern of the ship
 was rocking more than the bow, showing
 that she was twisting in the middle.

Now the wreck is in two parts lying
 near each other and partly buried in
 the sand. It is a picturesque scene
 on a calm day at low tide and it is
 hard to imagine the terrible scenes
 of last Monday.

Elmwood, Maine.

1906

Sept. 5 Clear as crystal all day, very cool, good sea breeze.

This morning Marin, Ruth, Rogers & I walked round the woods behind the house, naming all the trees and flowering plants. I took some snap pictures of Roger by the corn, and the young people on the wood pile. Then we walked down to the boathouse and waited some time for the tide to float the boat. I took a picture of the boat house. We all went out in the boat and rowed up above the bridge. It was very beautiful. Home for dinner.

This afternoon Mr. & I walked down with corn patch, and I took a picture (4.15 P.M. exp 128, time $\frac{3}{4}$ sec). Then Marin, Ruth & I walked down to the beach. I took my net and collected a number of insects. We wandered on the beach, the tide was down and immense numbers of Gulls were resting on the sands or flying about. A number of Terns were fishing and moving rapidly about. We returned home by the flats at the mouth of the river.

1906

Sept. 6

Trip to Scarboro Beach, Me.

Clear, mild, rather warm in the afternoon.
I took the 9.09 A.M. train, reaching Scarboro Beach Station at 9.52, and drove to the Atlantic House where Ruthven, Martha, Charles Turner welcomed. The place looks as it did when we visited it in 1904. We walked through the garden and along the willow path to Bloody Pond. In the cattail-lined pond on the way we started a Black Duck and later in the same pond I saw a Pied-billed Grebe. Another Gull of the same species was in Bloody Pond. We returned by the beach road to the hotel houses. All but Ruthven went into the water - The waves were high. We had a long talk in Ruthven's room before dinner.

Turner showed me a lot of very nice pictures he has taken. After dinner I was introduced to a Mr. Mayes from Canada, who showed me a lot of splendid pictures he had taken. Later we went into the wood overlooking the marshes and set talking the rest of the afternoon. Ruthven showed me the nest of a Northern Parula Warbler in a spruce. He saw the old bird feeding the young for two days.

I left at 5 P.M., and returned as I went, reaching The Elms at 6.23. Charlie had come this evening. Maria & Louis go home tomorrow morning.

Elms, Me.

1906

Sept. 7

Clear, light clouds, mild, light sea breeze-

Marine and Worth left this morning for Boston. Shortly after breakfast I put on a pair of rubber boots and took my glasses and net and went down to the mouth of the river to collect insects for Mr. Herkord. I walked completely round Long Point where the river makes a very long curve. I collected a number of insects. On a bit of beach near the mouth of the river I saw a Finch among a ~~A Finch?~~ few strands of beach grass. I was fifty feet away, and my glass brought the bird very close. I have a perfect view. There was a dark line running back of the eye, a light being above and below it's - The head was dark with a light line running through the center. The back was mixed black & brown. The breast and sides was very clearly marked with dark stripes, the under parts pure white. The bill was forked ~~as~~. The bird was very different from an American Sharp-tailed Finch that I had this afternoon. I returned to dinner.

This afternoon Mr. Charles Rogers & I walked to the beach, the two former soon returning. Rogers handled my net and caught a lot of insects, mostly on the marshy shores and along the edge of the salt marsh. I caught an interesting morsel. We met a gunner who showed us a Golden Plover that he had shot. ^{Golden Plover} ^[See note over page 12.] on the flats at the mouth of Little River on the Elms side. I examined the bird with much interest. Home to supper. The Gulls were very abundant on the beach just south of the bath-house.

Wile returned this evening. This P.M. I saw an American Sharp-tail on the rocks to the west on the beach. It had a perfect bird form.

American Sharp-tail

Elias, Me.

1906

Sept 8

Clear, cool, wind west - very, almost completely
cloud during the day, going by with brilliant day.

This morning Robert, Charles, George, Rogers
& I drove over to Kennebunkport & by a
canoe for George - I took three pictures of the
old store where father used to work as a boy.
It stands in the Port not far from the bridge
and was kept by Mr. Morley - I took a
number of other views. Rob bought a canoe and I
took a snap of George, Rogers & Mr. C. Root, who told it,
in the boat on the river trying it. We drove down
to the point by the church and then home.

This afternoon Charles & Rogers went home and
Rosa, Mr. & I walked down to the beach - opposite
the bath-house on the beach were standing to-
gether four large Plovers - The upper parts [see note
seemed yellowish mixed with white, breast grayish, under left, 12]
rest of under parts white. They did not look [see note
Suppose they were immature Black-bellied Plovers.
Later I saw another similar bird wounded,
with one leg drooping - It did not lift its head.
As it flew I saw black and white in the wings [see note
This probably was the same species - under left, 12]

The Gulls were very abundant at the mouth of
the river, three being, several hundreds. Among
them I saw six adult Black Backs.

Reeps were rather numerous,

On our return we visited the big barn
on the dyke -

Elms, Maine

1906

Sept. 9

Cloudy in morning clearing by noon. Clear and mild in the afternoon. A light breeze.

This morning Rob. Strong, Mr. Taylor and I walked over the farm. We visited the sheep and pigs and then went down to the crop of corn, some six acres. This will be cut in a week or so for the silo. We measured one stalk that was 13 ft. 3 in. high. Then we went down to the mill and inspected the tank very low. 1½ ft. down and the pump that keeps the tank supplied with water. The water in the tank is very low, there being but 1½ ft. instead of 8 or 9 ft. The dam leaks some and the water in the brook or river, as it is called is very low. There is danger of the tank giving out.

We found on an apple tree by the pig yard a large number of caterpillars eating the leaves. I took some specimens and will let Mr. Taylor (Charles J.) know what they are.

This afternoon I walked down to the beach by myself and walked up & down for some time watching the waves. The tide was high. A few gulls sailed by, some fifteen or twenty terns flew along fishing as they went and a small flock of Reeps wheeled by.

An immense number of winged ants appeared ^{flayed out} the piazza this afternoon. When I reached the spot by 5:30 they had gone, but I found about captured three for Mr. Henshaw.

I hopped rope this afternoon on the top of the bank. Saw Vanessa atalanta today. atalanta

Eelus Maine

1906

Sept. 10

Clear, with fog from about 9.30 to 12 noon.
Afternoon, clear, still, mild.

This morning George & I drove to Wells and met Ruthven Thaxter at the station by the 7.47 train. They stayed to dinner and returned leaving the house at 3.15 P.M. We enjoyed their visit very much. Ruthven brought an adult Bonaparte's Gull in full plumage picked up on the beach by George on the 8th.

At about nine this morning, as I went out to the piazza facing south, I saw about fifteen Great Blue Herons flying together over the large meadow below the road. They were in down. It was a splendid sight. They flew over the woods where the great colony of Night Herons used to be and I saw six alight in the tall spruces and other trees. It was a beautiful sight to see with my field glasses the noble birds soaring and poised against the tall sky -

This afternoon Mr. Ross and two ladies from Kennebunk drove over and staid all night, eight o'clock. They are 2^d Cousins once removed, from G.R.B. We visited all the stock as we did with Ruthven Thaxter and then went out on the river rowing up to the dam and down round the second island beyond the curve near the fence at the mouth of the river. It was very long.

We go to Cambridge tomorrow -

Elias to Cambridge, Mass.

1906

Sept 11

Clear, cool.

We bade our good friends farewell this morning after breakfast and drove down to the station. George had accompanying us to Boston - as we passed by Mr. Wills' house a migrant Shrike flew across the migrant road in front of us and alighted in a tree. Shrike in the woods on our left I saw a Great Blue Heron perched majestically on the very top of a tall tree, probably a spruce, his form outlined most beautifully against the sky.

We reached Boston at 10.30 and proceeded home.

Sept 12

Today I examined the Black-bellied & Golden Plovers at the Museum - I noted the various plumages and am absolutely sure that the bird seen by me in the hand of a gunner on Sept. 7 last and also the lame one on the beach on Sept. 8 were both Black-bellied Plover in imm. a fall plumage. I feel quite sure that the four birds that I found together on the beach on Sept. 8 were also Black-bellied Plover though they looked somewhat smaller than the wounded bird -

Trip to Salem, New York

1906

Sept. 15

Clear, mild beautiful day -

M.A. took the 9.30 Am. train at the north station Boston, Fitchburg R.R. for Salem, N.Y. to visit Miss Maria R. & Miss Florence Andover. I met on the train Keene Swift from Lynn Keene's sister married Hal Kennedy. They were with us to Housie Falls and we had a good talk. We were through the tunnel in Green. with mercury at 80° . It was very smoky. We reached Eagle Bridge at about 3 P.M. (regular time 2.33) and got away on the Delaware & Hudson R. at 3.30 (regular time 3.15), reaching Salem at about 4.30, where we found both the ladies waiting for us. We had a hearty greeting and walked to the house which is almost exactly as we left it in 1901. It is cozily nestled among the trees and is a delightful spot.

We have the same room that we occupied before and I will the same pictures on the walls. We talked busily till supper and in the eve before a wood fire in the library listening to a thousand stories of the foreign trip from which the ladies returned last May.

Salem, New York

1906

Sept. 16 Clear as crystal, quite cool, calm, an ideal day.
Mercury in my room at 9.30 A.M., 67°

This morning after a hearty breakfast, we walked over the grounds and sat in the bower talking, as well as on the piazza till church time. I have copied the various pictures about the house with my 1806 journal. In the porch is an additional picture, framed, an original water color by J. J. Audubon of a white Hare, and another of a Fox, with head pointed up, baying.

Some skins have been sent since our last visit as a perpetual gift to the American Museum of Natural History in New York City, among them the folio of original drawings by J. J. Audubon described in my Journal for July 5, 1801, and the Indian coat described in my former Journal. I saw on one of large trees behind the house a red squirrel with a white tail. He has a hole in the tree. He has been there for some time.

M. & I. went to morning service in the little Episcopalian Church closely and heard Mr. Boden Smith a man of 52 yrs., who has been over the parish since the former of 1802. He has the parish house all his coal, a horse and carriage, bay, and is supplied by friends & neighbors with food and clothing very abundantly, besides getting \$950 per year. He has a wife & five children. After service, M. & I. walked three & half miles on the Rupert road, returning to dinner. We enjoyed a hearty dinner with much most agreeable conversation.

Salem, New York

1906

Sept. 16

(2) We spent part of the afternoon on the prairie talking. The sun was just warm, and it was cool in the shade. At five o'clock I left the ladies and took a walk going to the village and taking the road south from White & Ossawa Creek and some distance beyond. The views over the valley were beautiful. Then I entered the fields on my left and climbed a hill whence I had a superb view to the south, west & east. The country is very broken, rolling over hill after hill. Large fields smooth when the grass has been cut, alternate with pastures full of cattle, and thick wooded tracts. I kept on and struck a road from the tops of which a had a view over the town which is so embedded in trees that the buildings are barely visible. I met there a very polite man named Alexander with whom I talked some time. He walked back over the hill some way to a lookout that a Mr. Hastings who lives nearby had built. From it we had a beautiful view of the surrounding country. The raised structure on a hill the other side of the town belongs to a slate quarry that, however, has failed. I notice that slate is used freely here, fences being made of it. I got home by 6.15, a little late for supper which is at 6!

This evening we looked over post cards collected by the ladies. Miss Florence has one book of cards received, and books of cards purchased on the recent trip. We enjoyed the views and comments immensely. Mr. Border-Smithe called later and we had a pleasant talk. He wants to take me to drive -

Salem, New York

1906

Sept. 17 Clear as crystal, calm, cool, 74° at 4 P.M.

It has been an absolutely ideal day in September - I spent this morning, about the place, in the house and out, taking a number of 4x5 pictures of the house and place - I am afraid it is hard to get a good photograph of the house it is so surrounded by trees. The front faces north and does not receive the sun. Miss Maria has sent to her brother in Australia the painting, by her grandfather, in oil of a rooster described in my Journal of July 7, 1901. She has given me a post card of her house on which she & Miss Florence have written their names. Miss Maria has also given me the

menu of the luncheon given by Baron Rothschild at Tring Park, England, by the British Ornithological Association and their guests. She had the members near her write their names on the menu. Edward Wilson went on the South Polar Expedition with Capt. Scott.

Salem, New York

1906

Sept 17

(2) After dinner I took a few more pictures of the house and street and then we all walked down to Slipley's house. He works for the Audubon certain days in the week. He went to see his Ginseng Ginseng Bed. He is raising the plant (*Cimicifuga foetida*) raising for the market. He has a building, 50 feet square, and about 10 ft high, the top being of slats a short distance apart to admit the light as through trees. The top is removed for the winter. The seeds are first put in ^{soil} ~~soil~~ on the cellar for the winter. The following fall, the seed having been in the cellar one year, they are planted in the soil in the building. ^{The next spring} ~~the following spring~~ ^{in year later} They are a few inches high and they are then transplanted and in a year or two they flower and fruit. Their fruit is gathered for the bed for two or three years and then, the root being reached its full size, the plant is taken up and the root dried and ready for the market. So seed is planted and plants are gathered every year. Seed now costs ^{\$6.00} ~~\$7.00~~ per lb. The roots bring ^{\$7.75} per lb. if good. Slipley has just gathered his first supply. A blight unfortunately burst his crop recently. There are some other Ginseng beds in Salem, from one of which several hundred dollars have been taken in in a year. Slipley will ship his roots to New York. The root is sent to China -

This morning Miss Maria read to us a charming little book of 45 pp. "Rob Lindsay and his School" by one of his old pupils. A reminiscence of scenes five years ago. Illustrated by H. C. Weston MacGillivray. 8^{vo} book, published at John Murray's House, by William J. Hay, 1905 - London, Samuel Bristow & Sons, Ltd. The author is W^m MacGillivray, ^{reputedly} son of W^m MacGillivray, Audubon's associate. The main Audubon

Salem, New York.

1906

Sept 17

(3)

This evening Miss Florence & I walked to the Post Office. Later we looked through one of the volumes of post card of the foreign trip ~~that~~ Mrs Maria & Miss Florence took last year. They explain with many interesting stories the various scenes.

Miss Florence has raised in the garden this year the following vegetables: — Lettuce, Radish, Cress, ^{lettuce} Beans, Asparagus, Peas, Spinach, Cucumbers, Corn, Squash, Okra, Cauliflower, Brussels Sprouts, Salsify, Beets, Carrots, Parsnips, Onions, Peppers, Tomatoes, Potatoes, Lima Beans, Thyme, Summer Savory, Parsley, mint
Bluebells —
Mrs Maria's flower garden is very attractive. The plants are going by now, and new ones are being set out.

Salem, New York

1906

Sept 18

A nice rain in the night, sun out by 8 AM
clear all day, quite warm, hazy in the distance.

This morning I spent some time in
the garden with Miss Florence & Shipleys who
were planting and digging up plants. Six
bulbs of Lilium Testaceum were set out.
I took a few pictures, walked to the mail
and wrote a number of letters.

This afternoon Miss Maria, Miss Florence
& I took a drive with Mr. Potter and his
nice carriage and a pair of horses -
We drove north west to Cossayuna Lake
and completely round the lake which is
three miles long, then south to East
Greenwich and home by the beautiful
Piney Road - The distance was about twenty
three miles. We were gone from two to
six o'clock - We followed White's Cudawa
Cres. some distance, passing over Cemetery Hill.
Near there we visited the house of a Mrs. Hutchish,
Scotch, built before 1811. In at the time of that
date the old fashioned stove had been put into
the house. The daughter showed it to me. There is
a place for the wood along the entire bottom of the
stove allowing a log about three feet long to
be used. The draft runs up behind and over
the top and the smoke pipe runs up from
the front-top of the stove. It is used only
for cooking or ~~it~~ is the open fire with
crane, chains and hooks. I remember now
~~that~~ Miss Maria told me that the house was

Salem, New York

1706

Sept 18 began before the Revolution, but as no brick makers could be found to make bricks during the Revolution, the brick work was done after the war - The house is of brick.

(21) Passing on we crossed Block Creek - The country is very hilly and very picturesque with much excellent forming land - Large areas are devoted to corn and now the stalks with rustling brown leaves covering acres in extent are most picturesque - Another large industry is raising cucumbers for seed - We saw Cucumbers many large fields given up to this industry. The ground was yellow with the fruit. Boys or men were seated at benches in the field with a large pile of the golden cucumbers beside them - A piece of metal with sharp edge stood upright in the board in front - The cucumber was readily and easily cut in two from end to end by drawing it against this rod, the soft interior quickly scooped out into a sloping trough leading into a barrel which becomes filled with the floating mass - This is cleaned and the seeds prepared for market - Later an agent appears in this section and purchases this seed in large quantities - It brings in the neighborhood of 22¢ a pound -

Three Red-tailed Hawks soaring above us at different places made a fine show in the heavens - The red tails showed very clearly in the curving flight

Salem, New York

1906

Sept. 18

(3) Cossayuna
Lake Cossayuna Lake is a very beautiful sheet of water in the townships of Argyle and Greenwich. It is three miles long and from half to three quarters of a mile wide. The long arm runs north east and in the northern part is a very picturesque heavily wooded island. The road runs close to the water for the most part, occasionally passing behind a short rise, or cutting across a projecting point of land. The cultivated or wood stretches of hilly land that surround the lake make it a very beautiful piece of water.

On the southwestern borders of the lake is a colony of Red-wings. A large area of swampy land covered with bushes and from this spot arose a deafening noise made by countless Red-winged Blackbirds that covered the tract. Finally one large black cloud arose and crossed the lake, then another and another till all were gone. There were at least five hundred birds.

We crossed the mouth of the lake and drove south, passed Mud Pond, a very pretty sheet of water, to the Batten Kill which we followed through East Greenwich, a small dead village. We passed a large upland, the brier covering a hillside. In front of the small house stood a glass case with jars of extracted honey in it. This was the only sign of life I saw in the village. Charles McLeanie who owns this place

Salem, New York

1906

Sept. 18 usually clears \$800 a year by his livery.

(4) We again crossed Black Creek on our return

I must mention one beautiful sight before we reached East Greenwich - We passed a large stack of field of buckwheat that had been cut and buckwheat stacked, the stacks about three feet high covering the field. The stubble standing in the field was of a pinkish color, making the most remarkable effect as you cast your eye over the whole area, a broad tract of rosy hue, with the dark stacks interspersed.

After passed Black Creek we drove through Piney Woods the Piney Road bordered by white pines on both sides, one side consisting of a heavy wood, the other of a double row of trees between while the open country is visible.

We spent the evening talking and looking over more post cards of the foreign trip. Miss Florence & I walked to the post office and market. On the standard scales at the market I weighed 163 $\frac{1}{2}$ lbs. [165 lbs on same scales, same day, on the 20th]

In the library are two small oil paintings of John & Maria Audubon by J. J. Audubon, and a small water color of J. J. Audubon by the great Cruikshank - An Indian hammer brought back by J. J. Audubon from his western trip from the Indians hangs by the fireplace and in the rock is a cane that belonged to J. J. Audubon -

1906

Salem, New York

Sept. 19

Clear party, light hazy clouds party, thunder in
the distance this morn. Temperature at 1 P.M. 82°.

It has been a very warm and we have
kept quiet. I have been about the place
visiting the Creek and watching Shifley (Car-
nelius C.) & Mr. Hale working on the old barn
which is to have a new foundation.

This morning about noon I took a number
of Audubon relics out under the trees be-
hind the house and arranged them in dif-
ferent ways on chairs and a settee and took
a number of photographs of them. The
relics are as follows:

A brace of pistols - Carried by J. J. Audubon on his
spur southern journey along the Gulf of Mexico
in 1831.

A pair of spurs - Owned by J. J. Audubon.

Palette - Used by J. J. Audubon all his life
and by his son J. W. Audubon after
him. A label on one side reads
'J. J. Audubon, Louisiana'; on the
other 'J. W. Audubon, Minnieland'.

The latter name is the place on the
Hudson.

Tome hawk - Brought back by J. J. Audubon
from the Yellowstone trip.

Stone hammer - Brought back by J. J. Audubon
from the Yellowstone trip.

Hatbox - Given to J. J. Audubon by Mr. Morris.
See 'Life & Journals', Vol. 1, p. 332.

A map of a part of the Mississippi River is in the case.

Salem, New York

1906

Sept. 18
(2)

Bonnie Knife. Given to J. F. Audubon by James
Carleton of Maine - Life & Journ. Vol. II, p. 173.

Stone Hatchet. Owned by J. F. Audubon,
probably from the Yellowstone trip.

Whale's tooth. Owned by J. F. Audubon
given him by whalers in New Bedford.
There were several of them.

This afternoon the ladies went to a fair in
the Parish House close by - I spent some time
reading the life of William MacGillivray,
associated with Audubon in

'A Memorial Tribute
William Mac ^{to} Gillivray

M.A., LL.D.
Ornithologist; Professor of Natural History,
Marischal College and University,
Aberdeen

By William Mac Gillivray
Written to the Signer

'In the eye of nature he has lived'

Edinburgh
Printed for private circulation
1901.

The copy was presented to Miss Maria by the author.

This evening Miss Florence & I walked to the
Post office and later Shipley came and tried
to scalp out a colony of yellow jackets, ^{very esp. sp.} in
the garden near the barn.

Later I called up on Mr. Samuel
Border-Smith - He showed two woodcock he shot today

Salem, New York.

1906

Sept. 20 Clear early AM, thickening later, rain in PM, clearing but cloudy soon - Warm.

This Maria's house was built in 1793, but she made the addition on the east end, including the large library which is 26 x 19 ft. in size. Two pictures in it not mentioned before are water colors by J. J. Audubon of English birds. The Blauvelt house nearly opposite this house was built in 1795-9 (photo'd it ^{from outside} ~~to day~~). The Williams house near by was built before the American Revolution. The old barn on the place here is 65 years old. It stood originally quite close to the house, but Mrs. Maria moved it 25 years ago to its present site. It is now being raised a little and having a stone foundation put under it.

This morning I collected a number of insects on the place for Mr. Hendson, two being Yellow Jackets that have a hole in the ground near the barn. I took his photographs of Miss Maria & Miss Florence under the trees back of the house. Miss Florence & I walked to the Post Office and did some errands. This afternoon we worked over photographs & post cards on the piazza. I also wrote some letters.

This evening Miss Florence & I did some errands in the village. The lack of light on Broadway as the water power is low, makes the street almost pitch dark. Slightly came this evening and tried, as on last night, to drown with hot water the yellow jackets that have a hole by the barn. He all washed him.

A small green deep-hopper common here & at Blauvelt & in the Hamlets of the neighborhood.

[See Newell, Sept. 23, 1906.]

(62)

Salem, New York

1906

Sept. 21 Heavy rain last night for some hours,
day clear with passing clouds, warm, mercury
at 6 P.M. 76° -

This morning I visited the hornets nest
and I guess the colony is stampeded out. One or
two lone individuals were flying about. I
killed all I saw. I went to the village
three or four times this morning to see about
trains, etc. I walked over the place and
put an interesting beetle in the bottle.

[*Diabrotica 12-punctata*, ^{in Hausea,} Sept. 23, 1906.] All the other insects in it
were taken on the 20th. I tried to get a photo-
graph of the oil in our room, representing
two cans by John W. Audubon.

In the hall on the second floor is an oil
of John W. Audubon by himself. Miss Florence
brought it back with her from the South
a few years ago.

This afternoon we all took a drive with
Mr. Potter directly north-east through beautiful
hilly country into Vermont a short distance. The
whole country is covered with fields of corn stalks.
At one place we started a fine adult Red-tailed Hawk
from a swampy place near the road. It fled to a tree
close by and then sailed over the field showing its fine red tail.
Returning we made a detour by the cheese factory, reaching home
by 5.30.

This morning I photographed Audubon's canoe, in constant Audubon's
use by him.

Canoe -

Mr. Boden-Smith called this evening to bid us good-bye.
(Red Damselflies collected today and at Elmo, common in both places are
Diplax rubricundula. Tide Hausea, Sept. 23, 1906.)

Salem, N.Y. & Cambridge, Mass.

1906

Sept. 22

Steady rain all day, very heavy at times.

We woke up this morning to hear the rain falling steadily. It was most refreshing for the earth is in sore need of it.

Last evening I listened as I sat on the piazza to the continuous buzzing of what may be one of the Tree Crickets. It was a subtle sound that one might be easily unconscious of. It had much the quality of Oecanthus rufescens which I heard a little on the evening of the 20th. I listened to this continuous buzzing on the evening of the 20th and heard it more faintly at about 7.30 the next morning - I shall inquire about it.

I saw the Red Squirrel with white tail yesterday again. It is very striking. It seems as if the dark color along the center is increasing.

At about 9.40 we bade Miss Horace good by, and the rest of us drove to the station in the rain. At 10.05 we waved another good-bye to Miss Maria as the train left the depot. It pored at Eagle Bridge in sheets. We took our train there about on time 10.44 and ^{80°} good seats in the parlor car and a fair lunch. It took 8 min to go through the Tunnel. In got out at Cambridge while I went to town ^(3.45 pm) to have the checks. The trucks came home at about 11.40 P.M., and we hurried over to Mrs. Cumming where we make our bed quarters for the present as the water is cut off from our house owing to a leak that sprung just as we were leaving on the 15th last.

I weighed at the station in Greenfield (penny-in-the-slot) 161 lbs. on the 15th, and 164 lbs. (same scale and some dress) on the 22nd.

Salem, New York.

1906

- Sept. 15-22 List of birds observed by me in Salem, N.Y., A few birds were seen on the 18th between Salem and Cossayuna Lake on a drive - This are indicated. x = between Salem & the Lake.
- 1 Duckes sp. 18^x Cossayuna Lake.
 - 2 Buteo borealis 18³ seen 21¹ seen.

Trip to Lancaster, Mass.

1906

Sept 29

M. & I took the 4.08 train at the North Cambridge Junction this afternoon for South Lancaster to pass Sunday with John & his wife. We met on the platform at Sterling Leslie Hastings whom we used to know in Jaffrey. He is uncle to Fall Howe and his brother. He is now senior at Harvard and we had a very pleasant talk as far as Berlin - from there we passed over the trestle bridge in front of the great dam at the Clinton Reservoir which is a marvellous piece of work.

Changing at Clinton Junction we soon reached South Lancaster where John was waiting for us. (5.36 time out) We drove to the house and were welcomed by all the family Mrs. Bayer, Jack now freshman, Evelyn, Nora, Natalie & Duncan.

It is all as lovely as ever - We spent the rest of the afternoon and evening talking and looking over books - The weather has thickened and it threatens to be a stormy day to-morrow.

Lancaster, Mass.

1906

Sept. 30 Heavy rain in the night with sharp thunder and lightning toward morning. Light rain clearing by 10 A.M. sun and cloud the rest of the day. Wonderful sunset. Air cool.

After a refreshing sleep and hasty breakfast, John & I drove down to the Museum and spent the morning there. I saw many valuable additions: a large series of *Coccyzus ridgwayi* from Sonora by W.W.Brown; another series of the Thick-billed Parrot with unfledged young in alcohol, and with several sets of eggs; an additional Great Cuck's egg, making a series of six, a beautiful sight; a series of the Bristle-thighed Curlew; a skeleton of the Great Cuck. The Museum is full of invaluable treasures. Mr. Carroll, whose sister was John's brother Nat's first wife called. Mrs. Thayer, her & Mr. came over from Alameda and staid a while. John & I walked home to dinner.

In the afternoon John & I took a long drive going through Bolton and Harvard. The views are superb. We saw a number of birds recorded later. Returning to the house we found Sayard & Mrs. Thayer and their daughter and Mrs. Kate Thayer & Mr. Carroll. Soon after John & I walked over to see the Pheasants. There are some fifteen hundred old and young birds free. They rose as we walked through the grass and brush and cockled as they scolded off. Hare, the Scotchman, was as entertaining as ever. The large flock of Mallard flew to us alighting about us in the grass. November 1. ^{they} will be off for a month and then will be pleasant shooting. We had a delightful evening in the house.

Oct. 1 Monday morning I visited Joe the Red-tail. He is in fine plumage. We took the 9:37 train from So. Lancaster to Boston.

Lancaster Mass.

1906

Sept 30 Birds observed on September 30, chiefly on a drive through Lancaster, Bolton & Harvard:-

Buteo sp., probably lineatus, pursued by Crows.

Cornus brachylophus, numerous

Cyanocitta cristata, ♂ & ♀, very noisy

Zenaidura g. acutirostris, a large flock of at least two hundred, principally young birds.

Cupheafus carolinus, at least one in the flock of Mockers.

Passer domesticus, numerous everywhere.

Astragalinus tristis, several

Melospiza c. melodia, numerous by roadside

Spizella socialis, a good-sized flock by the roadside.

Parus atricapillus, heard

Galeoscoptes carolinensis, one by road.

Sitta carolinensis, heard several times

Merula migratoria, abundant.

Scialetta Scialetta, one seen & heard.

Lancaster Mass

1906

Oct. 5

Gloomy morning, sun breaking out later -

This morning Ruthen & I took the 8:10 train at the No. Camb. Junc. for So. Lancaster where John Thayer met us - we spent the morning in the museums and then drove to see the Lancaster elm, reaching the house in time to see the Hawks & Owls before dinner - We met all the family except Jack - I gave Mrs. Thayer two jars of Wall-monum and said John is to find of, and a small bottle of Cretan honey. Helen Dexter brought me a book of it that she took from Crete when the excavating was made last spring - The locality was Pachia Ammos and Turnea - The peasant brought in extracted honey constantly to the party - The odor is peculiar, the taste delicious - John drove us in the afternoon to Clinton and I left the train at No. Camb. Junc and went over to Mrs. Reed's to a tea where I met among others Prof. T. L. Wentz's wife and his ^{of Baltimore} where we met two years ago at Seal Harbor - I also met Miss Redfield. I staid to tea and Ned Reed & I went in to the Botanical Club together - It was the first meeting and I enjoyed meeting the members again.

Cambridge, Mass. to Shelburne, Vt.

1906
Oct. 8

Brilliant day, very cool.

I caught cold Friday night, the 5th, and have a bad one, but as our house is closed, Trinity are gone, and as we slept last night at Mrs. Fessenden's on Brickett's Hamlet St., we, Mr. Mary Deane Dixie & I took the 9 A.M. train for Shelburne, making the usual connection at Portland. The foliage was very good as we neared the mountains, the colors being much better than I expected. We reached our destination in time, 5:04, and found Howard awaiting us, Mrs having driven to Enfield. At the house we found him Fanny, Maysey, Lawrence (Mrs came later) Dr. Billy Smith, Dr. Roger T. Lee, Miss Helen & Miss Louise Davenport, Mrs. Sheffield, Miss Elizabeth H. Smith. There are some strangers in one of the cottages. We had a hearty welcome and passed a pleasant evening. My cold being so bad, I went to bed by 9 o'clock -

Shelburne, N.H.

1906

Oct. 9

Rainy day, pouring at times with wind, heavy lightning and thunder in late P.M. and evening.

My cold has been very bad all day and I have kept quiet in the house. I showed my photographs, talked, and read "The Sun of the Amazon Wild".

Col. F. Batchelder sent me a lot of *Nicandra physaloides* Saentz. to name.

Mary Dixie & Miss Lizzie Davenport took a good walk this afternoon as far as the State boundary between the rain - I have put up my recording thermometer in the old place in the shed and shall make record during my stay here.

St. Johnsbury, Vt.,

1906

Oct. 10

Heavy clouds, with short continual rain
stoppings at intervals -

The cold of this night has reached the
acres, as it cannot be much more. Of course
I have been in the house to-day. I have been
reading 'The Lore of the Labrador Wild'. It is a
sat-story. I saw a large flock of Blue Birds
near the house this afternoon.

Mary Dexter & Miss Louise Davenport walked to
Gates Cottage this morning. The latter showed
me a number of her photogravures. They are
very beautiful. Particularly attractive are
those of the logging camp taken last fall.

Shelburne, N.H.

1906

Oct. 11

Chilly, heavy clouds, much rain, some
Thunder, hail and sleet in the P.M., sun
breaking out at rare intervals briefly -

My cold has been better today. but
it is not over yet. This, plus the weather,
has kept me in the house. I have
finished 'The Home of the Labrador Wild'
and have been very much interested.

It is a sad, sad story. Mr. May Dixen
and his Louise Davenport walked this ^{evening} ~~afternoon~~.
Mr. Mrs. McMillan called in the automobile.
~~and said a~~ ^{and} ~~time~~ were delighted to see them and had
much to say about what had happened
since we were here in July. I shall
get over to their place as soon as my
cold will allow. These quiet days
produce little news -

Shelburne, N.H.

1906

Oct. 12

Sunny, clear, very dry, cool, fleecy clouds.

My cold hangs on though I think it is better to-day. It is now a week old. I took two walks to-day, one in the morning about noon, with Mr. Thim Smith, down the road as far as Phœnix. The foliage on Crows nest and the long slope leading out in beyond words in its magnificence of color. Green, red, yellow, brown are all mingled in the deepest shades. It is useless to attempt to express it. I saw Juncos constantly and but little else. Two Marsh Hawks were playing together on the side of the slope, their sun white rumps showing as they turned.

I invited May with the Miss Davenports to take a morning drive and Howard took them to Escomb and some three miles along the Glen Road. They were enthusiastic over the view and colors. The big mountain's were white a good way down. Herison & Adams have made a fine show of white to-day from here.

This afternoon May & I walked down to the river and on our return walked round by the Bungalow, & Jordan Cottage. All the country is beautiful. The color is at its height. Mr. & Mrs. McMillan called again in the auto. to invite us all to supper tomorrow. Celia, I cast them off going, but May & the Miss Davenports will go.

The Salem & Lancaster photos are very good. I have been giving "Shelburne History to day from 'Sisters of Cox' Come, New Hampshire."

Shelburne, N.H.

1906

Oct. 13

Glorious, clear, crisp, cool day.

Cold still bad. When will it mend.

I have been in the house to-day as usual except for an hour's walk with Mr. & Mrs. Helen Davenport as far as the railroad track between 12 & 1 P.M. The air was delicious. From the large open patch of ground on the right of the road just before reaching the bridge there rose a large flock, at least one hundred in number, of ~~Titlarks~~ Titlarks. I have never seen them before and I was delighted. They uttered a brief series of notes and showed the white wing tail feathers as they flew over.

Mary Dexter & Miss Louise Davenport started about four and walked to Burbank farm, sat in Grammy Stalberg's settee and watched us on the return.

I read & wrote today, lying in the bed most of the afternoon. Dr. Minot, a lady, and a friend of Dr. Dieman, came this evening to stay for a while and she visited me about 5:30. The mucous membrane has been badly affected and it will be some time before I get over this. I am badly disappointed, especially on account of Mary Dexter.

She, with the two Davenports, went to tea at the MacMillans and had a fine time.

Last night as we were going to bed, a fox began Fox to cry very close under our windows. It was a weird sound. Gus heard it too. This morning as Howard was visiting his muskrat traps he saw the fox in the field opposite the little school house, and fired without effect.

Shelburne, N.H.

1906

Oct. 14

Cool last night, the mercury reading 28° F.,
warm during the day, clear, glorious, still.

My cold has seemed about the same to-day
though I may be getting better. It is now nine
days old. I walked today between 11.30 and 1
going slowly with Mr. Foster to Shelburne Bridge
and then back and down the road as far as
Katie Burgess's house. I didn't care to walk
more. I didn't see any Titlarks, as I hoped,
but I saw Juncos, Yellow-rumped Warblers,
Bluebirds, Song Sparrows, a female Ruby-crowned
Kinglet and a Sapsucker.

Leighton Bush

I met some professional photographers from photo by
Portland and I got them to take the Leighton professional's
Birch. Their plates are 8 x 10. One of the fa-
tigues is Mr. E. Russell Barbour of Portland,
Me. He said that he took a great many
photographs and his wife colored them.
They sold all they made, getting orders
over from Minneapolis. I shall wait
him later to hear how his pictures of
the birch came out. He took two positions,
the first, east of the birch, and the second across
the main road looking towards the Scudder
Cottage.

Howard got two muskrats in his traps
this morning. He told me that there was a
family camping in the woods back of here.
They had a cat there, that had crossed with
a Fisher that was seen near here, and had
had two litters of kittens.
I spent the rest of the day in the house or on the porch.

Kittens,
Cat x Fisher

Shelburne, N.H.

1906

Oct. 15

Warm, rather hazy, beautiful day.
 My cold seems to me the same, but
 I hope my head is a little clearer.
 At about 10.30 A.M. I walked as far as our
 Shelburne ^{home} where I was glad to sit down on
 a log and rest. While sitting there I saw
 a Cow chasing a Red-tailed Hawk. They
 were going towards Gray - By the old
 Green place I saw a Black-throated Green
 Warbler. I also saw the bird I called yesterday Warbler?
 a Ruby-crown, but I don't think it is. It is as [I know]
 big as a Yellow Warbler, has a marked white ~~white~~^{white} eye-ring,
 and white wing bars, uniform gray ^{Ruby-crown} above.
 Light beneath without perceptible streaks. [See Oct. 17.]
 Many nests were and we returned in time
 to welcome the Newell's with Ellen &
 Andrew to dinner. We had a good time
 and I spent a couple of hours afterwards
 in the pine grove back of the house.

Dr. Kennedy has just written me that
 Hal, last Tues., the 9th, had a lightning
 stroke in the eyes. He will take
 weeks before he is over it certainly. It
 is a very remarkable case - I have
 written him -

I finished "The Dratt" by J.C. Lincoln
 to-day. His very well drawn -

Shelburne, N.H.

1906

Oct 16

A rather cloudy day with sun at intervals of the time, a breeze most of the time from the east.

I really think my cold has broken, for I have felt much better today - I have stayed in the house except for about an hour this noon when Mr. & I walked a short way up & down the road near the house. I caught an interesting butterfly, two of which were fluttering about by the fence. I have been reading today "The Louisiana Purchase" by James K. Hosmer, and find it very interesting.

Mary Dixie and Miss Louise Davencourt walked this morning from the road to Myall's Brook - Mary played tennis this afternoon with Mr. Avery. I have but little news these quiet days to record.

Mr. Barry, who I saw not before breakfast this morning with his gun, tells me that yesterday morning riding in the woods back of the house a short distance he saw a very large owl. From his description I think it must have been a Great Horned Owl. He said it seemed to stand sixteen inches high. He flew from tree to tree as he watched it from quite near till it disappeared.

Shelburne, Vt.

1906

Oct. 17

Cloudy in early A.M., clearing, not dry my dear
and cold -

I feel about the same as yesterday. Left
in the house most of the time. I took a walk
in the morning with my brother, Tom
Darensburg and his Party - We went up the
road to Burbank's Brook and then down into
the meadow toward the river. Saw in the
road a little snake (*Storeria occipitomacu-*
lata) - A small number of Rusty-Blackbirds
were in the trees near Hamlin's (the old Green
place). On the return a male Ruby-crown
kept ahead of us for some distance, flitting
from tree to tree and singing softly -

After dinner Gus took a party down river
in the canoe. There were many, his Louise
Darensburg, his Smith & his Dunckelce. They drove
up to Hubbard Hill (3½ m.) and went down as far
as nearly to Dead Bridge - It took a sweep
as they started and later we walked
down through the meadow to the river and
flotaded the boat as it passed T.

During our walk this morning I saw
a Partridge standing erect in the middle
of the road not far ahead of us in the
Cathedral Woods this side of Burbank's
Brook. He stood motionless for a minute
before flying away -

This evening we had a "sugaring off".

Shelburne, N.H.

1906

Oct. 18

Clear with light clouds, wind still with east where it has been several days. A beautiful day -

I have felt much better today and I trust that I am soon to put this cold behind me.

This morning Mr. & I took a walk up the road. At the school house we walked out on the broad plateau opposite where we had a fine view of Long ridge extending from our house to Evans' Nest. I never saw such rich colors as cover all the long slope from top to bottom. Walking on to Evans' we crossed the long field to the foot of the slope and ~~chose~~ ~~and~~ admiring enough the beautiful trees clad in the deepest reds, yellows, browns of all shades. A Red-tailed Hawk flew past us and Juncos were abundant.

After dinner Mr. & I with Mary, Miss Louise Fair Smith & Mrs. Ducklee walked through the big pasture back of the Scudder cottage. We saw another Red-tail soaring by - he returned over Sunset Rock -

Shelburne, N.H.

1906

Oct. 19

Heavy clouds all day, air damp, no rain.

I am much better to-day, but have

staid in the house owing to the dampness.

This morning Mr. Gilbert J. M. Parry of Medford, who is here with his mother and sister, went into the woods with a guide to spend a couple of days, shooting. I hope he will get something - Mr. Parry has a fine Century camera with 5x7 plate and has taken a number of pictures, but I have seen no pictures results.

I finished reading to-day 'The Black Tortoise', being the story of old Frick's diamond by Frederick Villiers, Doubleday Page & Co. 1902. It is a Norwegian tale translated from the original and is a capital detective story - I have plenty of time for reading.

This afternoon I read aloud in an room to Mr. May & the Miss Davenport, some of Conan Doyle's Detective stories. This morning I read aloud in the sitting room Edward Everett Hale's 'The Man without a Country'.

Howard found a Raccoon this morning in one of his traps - I saw it.

Shelburne, N.H.

1906

Oct. 20 Heavy rain last night and during the first part of the morning. cloudy all day with my beautiful sunset -

I am very much better, but the dampness of the day has kept me indoors.

I read and write letters and talk(s).

I eat and read several of Conan Doyle's Sherlock Holmes stories - they are very clever. I am reading, to my self "The Conquest of Canaan" by Booth Tarkington.

Mr. Fahey returned this afternoon. He had a fortunate time but he got no game excepting a single Partridge. The rain of last night and this morning drove the deer away to more sheltered quarters -

Mary and the Miss Davenports drove to Mr. McMillan's this afternoon to call - Mrs. McMillan meanwhile called here and returned and neither way did the parties meet -

Shelburne, N.H.

1906

Feb. 21

Cloudy and sunny, mild, brilliant & caressed.

I am rapidly leaving my cold behind.

This morning Mr. Mary, Miss Louise, Miss Smith & Mrs. Drunklee walked down the road as far as Evans' and then turned into his field and walked through it and sat on the rocks and old fence at the further end. A red squirrel with a worm in its mouth was very curious and kept running about on the old wall very close was. The view of the slope of Crows Nest is still very beautiful and I cannot tire looking at it. We returned to dinner.

This afternoon a party of us, Mary, Miss Smith, Mrs. Drunklee, Miss Fanny, Sue & I drove in the three-seated wagon with four horses round the square, crossing Shelburne bridge and reconning at Head. It was a beautiful drive. At Burbank's farm we visited Grammy Flalbird's seat to which I have referred in my extracts from 'History of Coos County'. This was my first outing since I have been here, for thirteen days and it was a great delight. Our four horses passed two big automobiles without the slightest trouble - I don't think they looked at them. We reached home by quarter of four.

We had a glorious sunset -

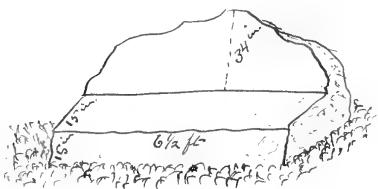

Shelburne, N.H.

1906

Oct 21

(2)

I wish a few words more about the Granny Stalbird's settle. It stands on the Burbank farm, back of the site of old house which has recently burned down, on the north side of the road - near it is an old summer house. The stone seat faces up the river on the edge of a long wooded descent, and the location commands a very fine view of the valley - This fragment of the old ledge under which Granny Stalbird sheltered herself and horse from the storm is just as it was left by the men who were blasting the granite for the railroad. The seat is something like this:

The original site is below the village not far from Mrs. Cook's - Mr. Philbrick is going to move the seat to his own farm -

I examined to-day what is left of the famous Butterbush behind the barn. There are about twenty-four stems rising from the ground, the bark at the bare bases gnawed by the pigs. I should say that all but three were dead. These three had shoots from one to three feet long, bearing on them the remains of last spring's inflorescence. There is still a little life left in them, but I fear that ere long there will be nothing alive of the Butterbush -

Shelburne, N.H.

1906

Oct. 22

Cloudy, with chilly east wind.

My cold would entirely disappear, I feel
sure if the sun would only come out and stay.
Mary Dexter left this morning much to our re-
gret. With her went Miss Smith, Mrs., Miss
& Mrs. Parry. Mr. Parry says he will send me some
of his pictures. His address is 'Mr. Albert J. M. Parry,
216 High St., Boston'. He gave them a good
send-off as the train passed.

I passed the morning quiet in the house
except for a drive with Gus to the post office
when I saw Mr. Simpson. He is building a
new house between the church and Clemens
Brook and near his house is going up a
town hall. The unsightly ruins of the
fire of last May 23 disfigure the looks of
whole place -

I spent the afternoon at home too - Mr.
& Mrs. McMillan called in the auto. Mr.
McMillan drives it to Portland to-morrow
and to Boston next day - I am so sorry
that I haven't even been able to get to
their house yet, but I hope too, surely,
this week -

I have finished today 'The Conquest
of Canaan' and I have been much in-
terested in it -

Shelburne, Vt.

1906

Oct. 23 Rain in early morning stopping by 8 A.M., dry rest of day with occasional sun glimmers in P.M., wind west -

The chilly morning kept me in doors. I have read and written. I am reading now 'The New Recto' by Stanley Weyman. I read also some of Conan Doyle's Detective Stories.

This afternoon the sun breaking out a little I took a walk with Miss Louise down the road as far as Hope Austin's cellar, some nine and a half down - How I enjoyed being out again. The air was good and the tree fine - the leaves are holding on to the trees this fall much longer than usual.

Mr. McMillan took Gus this morning at 8.30 to Portland in the automobile -

Sturbridge, N.H.

1906

Oct. 24

Glorious moon last night, brilliant sky to-day,
clouding in latter afternoon.

This morning a party of us consisting of, Mr. Waumbée
Miss Louise, Miss Helen, Mrs. Drucklee, Miss Fanny
Gus & I went up to the camp on Mill Brook. Wijewam
Howard drove us and returned for us. We started
at 9:30 and left there at 4 o'clock, spending
six hours there. Gus and four other men
clubbed together, bought 4 acres of land on Mill
Brook or Austin Brook, a short distance below
Rowles and Pitchers on the opposite side of the
stream from here (right bank) and they have
built a neat, pretty camp two stories in
height. They call themselves 'The Anasa-
quinticook Club', and the camp 'Waumbée
Wijewam', Waumbée being the name of the
Indian chieftain who with his tribe
dominated at one time the Androscoggin
valley. The lower story of the cabin con-
sists of a large living room and kitchen.
A fine large open fire place is in the
living room and this room serves also for
meals, the table standing in the corner next
the kitchen where is a large stove and
plenty of shelves. The second story con-
sists of two large rooms with two large mi-
des in each. Any member can take the
cabin for himself and friends, by engaging
it beforehand, for ~~some~~^{ten days}, excepting
during October & November the shooting season.
Each member has a bed there during those

Shelburne, N.H.

1906 months. The building is prettily nestled among the trees within a few rods of the brook.

(2) It has a broad piazza on two sides, the east and west.

Loggers were chopping near across the brook and we went over and watched them. I took a number of pictures, nine, of the logging operations, two, late of the cabin, and one, an interior with Gus, Miss Fanny and Howard who had returned from us. By the fire place. The men were making a yard for the logs that were being cut above. The yard is made thus:

It is built on a slope, and on it they pile from above the logs which are finally loaded on to sledges in the winter bed logs. from the lower side and dropped to the river for the spring drive. As the pile increases and occasion requires they lay logs parallel to each other from the rear of the yard up the slope, and roll the logs along this onto the yard. These logs are called the skidway.

We watched the men fell trees and photographed one tree in the act of falling. Two trimmers were cutting off the branches from the fallen trees and a man with a horse was dragging the trunks to make

Shelburne, N.H.

1906 the yard.

Oct. 24

We walked up to Bowls and Pitches before dinner and were ready enough for our meal. How delicious the food did taste. Soup, steak, baked potatoes, white and graham bread, apple mince pie, crackers and cheese and hot coffee was quickly devoured. Then we sat round the warm fire and talked. It cost each member of the Anasagunticook Club for the four acres of land, the building and all that is in it at present, consisting of nine chairs, a large table, a couch that can be used as a bed, five mattresses, piles of warm coverings etc., etc. a little less than two hundred dollars.

They will get no end of pleasure out of it, besides giving pleasure to so many of their friends. The Club was organized on May 11, 1906 and the building was ready for occupancy by about the middle of June. I counted in the Guest Book in which we registered our names about seventy names, showing that good use has been already made of the cozy wigwam. We were loath to leave this lovely spot. A logger whom we met in the woods said that he saw four deer yesterday and two today -

Scribner, N.Y.

1906

Oct. 25 They began rain this morning, clearing in middle Am. Sun and cloud was gone, brilliant moon.

I kept in the house this morning - I finished 'The New Recruit' and I think the characters are very well drawn indeed. I read aloud a Sherlock Holmes Story -

After dinner I walked down to the river and over to the Island and then back and up on to the Knobble which I haven't set foot on this visit. Was pleasant to wander over the top which so reminds me of my introduction there in 1880 - Descending at the further end I crossed the field and went up to the Everett Cottage where I enjoyed the beautiful view - Not long after returning I started out again after Mr. & Miss Louise who had gone on ahead. I found them at Katie's red house and we returned together - The cloud effects have been very beautiful today

Shelburne, N.H.

1906

Oct. 26

Cloudy morning, clear & sunny afternoon.

The Miss Davenports left for Boston this morning and we waved them off as the train passed.

Later I drove over to the village with Howard and took two pictures, one of the ruins of the Morse Tavern, and one of the ruins of the Wintrop House. It was very dull but I hope that a long time exposure will bring good results.

This afternoon Howard drove Mrs. ~~Dick~~^{dark} Duncklee, Mayery & me to Gilead. We went down on the south side, and returned on this side of the river. It is a very beautiful drive, being the same that I took last Sunday the 21st with Mary Dexter and others.

Later in the afternoon Mr. & I took a walk up the road and went some way along the path in the wood opposite Hamlin's. The woods are sadly stripped.

I began yesterday and finished to-day 'Calumet K' by Merwin-Webster published by the Macmillan Co. It is the story of the building of a huge grain elevator in South Chicago in spite of opposition from Railroads and Unions.

Shelburne, N.H.

1906
Oct. 27

Dull, cloudy, chilly, rain in afternoon.

I drove over to the station this morning and saw Mrs. Duncklee off for Cambridge.

Then Howard & I drove to the village. I saw in the ruins of the Winthrop House the old well dug by Dr. Oliver Howe when he built the house. (See extract from "History of Coös County"). He dug the well some fifteen feet deep and lined it with round stones. It can't be more than three feet across. It was under the flooring of the house and was discovered only after the fire.

Returning I walked over the intervals on the Farm, tracing the creeks that intersect it.

I came across a dead male Flicker that was quite fresh and had no marks of violence on it - I saw a trapper with a 'coons down by the river. The chilly weather drove me in for the rest of the day. I had a talk with Mr. McWilliam over the phone and, if it is pleasant tomorrow I shall drive over and take dinner with them. I do long for one good clear day - We go home on Monday, the 29th.

I have finished today Frank Bolles' "Chocorua Tenants" - they are very pretty verses on birds written in the native Hiawatha -

Shelburne, N.H.

1906

Oct. 28

Raining hard at rising, clearing and sunny in middle morning, remaining so with light clouds till near noon, cloudy & chilly afternoon with very little sun

This morning I measured the front of the main house. The older part was built in 1861, of the newer in 1905.

The older part is approximately 40 1/2 ft. on outside.

" newer "	" 23 1/2 ft.	" "
-----------	--------------	-----

" total length "	" 64 ft.	" "
------------------	----------	-----

" percentage of newer to entire part is	.367+	" "
---	-------	-----

" " " older "	" .58+	" "
---------------	--------	-----

At 11 A.M. Howard drove me to the McMillans. Dinner at 12. On the way we stopped at the village and I the McMillans took ~~six~~ ^{six} traps (14) of the old Home well and the ruins. I was sorry to find Mr. McMillan in bed with a bilious attack. I had a very pleasant time with Mrs. McMillan & the children, said to dinner and went over a number of pressed ferns. They go down to Boston on Wed. next, Mon. 1 and go to the Victoria - I saw the monkey. He goes, too, in a small bird cage, covered over with a box - Gus called for me at 3 o'clock.

We return to Cambridge to-morrow leaving here only Miss Porter & Miss Mandecai, from Washington -

I saw in the village the man who saw a Fisher with his cat in the woods (See under Oct. 14). He had with him and showed me two of the kittens, one black, one white. There were two litters. They look like common kittens -

Shelburne, Vt. to Cambridge, Mass.

1906

Oct. 29

Cloudy, cold, clearing -

This morning was blustering and cold. Snow flakes were in the air and snow lay on all the near hills even as low as on Cabot. It was a pretty sight. We said good-bye to the family at eight o'clock and, wrapped up in heavy fur coats, we drove to the station with Howard. When our 8.30 train drew up, there was nearly an inch on the steps of the cars. We reached Boston at 4 o'clock nearly and were home before five. This time my Shelburne trip has not been a success, owing to my heavy cold. I have had a number of pleasant walks when the sun was shining and many pleasant hours in the house, besides two or three drives and one nice time at the Wambee Wigwam, but most of the time was an aggravation -

Shelburne, N.H.

History of Coös County, New Hampshire.
Syracuse, W. A. Ferguson & Co., 1888

Extracts:-

"One of the first of these pioneers was Hope Austin, who came to Shelburne in 1771, [the original grant was made in 1768] and began a clearing on the north side of the river, near the main line. The sun was five feet deep when his wife walked up from Belknap, carrying one child in her arms, while two others clung to her skirts. Mr. Austin had neglected to provide even temporary shelter for his little family. But spruce boughs were handy, and in a short time a roof was thrown over the log cabin, some rough boards nailed together for a door, the sun shovelled out and a fire built between stones or green logs. Here they lived, making occasional improvements, until prosperity enabled him to build a more convenient frame-house. Of the family of five children, May and Judith remained single. Lydia and Hammon married Samuel Wheeler, James married Sally, daughter of Joseph Lary, Jr., of Gilead, and built a handsome two-story house a little below his father's. Of his children, John and Caverino died, and Deborah married Rose, daughter of Ezekiel Coffin, and lived at home till after the death of his father, when he moved to Gilead, and the name of Shelburne's first resident was dropped from the records. Mr. Hope Austin is remembered by elderly people of to-day as a pleasant-spoken old gentleman, very much bent;

walking back and forth from his house to the mill, with his hands clasped behind him. The Ains-
tins, as a family, were pleasant, hospitable and
industrious. Tom of Shelburne. Chap. CVII, p. 871.

"Thomas Green began a home in the heart
of the forest; by good calculation and economy
he not only made a living, but laid up con-
siderable property. In his old age his mind
became feeble and disordered, and though worth
enough to buy half the town, he was haunted
by a fear of starvation. One evening in early
Spring he came out of his room and went
out at the back door. He was never seen
again. Edward, a son of Thomas, married
Nancy Birdin. Three of his children, Lyman,
Darius and Weston, ten grandchildren and
eight great-grandchildren, resided in Shelburne
in 1881. George, another son of Thomas, when
he became of age, received \$100 in cash, and a
piece of land on the Magalloway. He sold
this land, bought a lot just across the river
from home, built a tiny house containing
only a kitchen and bedroom, and set up house-
keeping by himself. Three or four years after he
married Hannah Lary. As fast as his means
allowed he built additions, till, in 1817, it
was a long two-story house, with large, square
rooms above and below. It was furnished for
a tavern, and for more than fifty years of-
fered accommodation for the travelling public.
The large yellow globe for a sign on which

the date was given, was an object of great interest to the boys in those days, people from Upper Coös on their way to Portland, frequently fifteen or twenty double-teams at once, stopped here to bait their horses. When the Grand Trunk Railway was built, the glory of Green's Tavern departed. Mr. Green was an honest, plain-spoken man. It is said of him that, knowingly, he would not defraud a person of a single cent. Jonas, youngest son of Thomas Green, a hard-working, stern and somewhat unsocial man, lived on the home-place until the death of his parents; married, first, Mercy Lary, second, Anna Susannah Oliver, his youngest son, bought the Green Tavern-stand in 1880, and remodelled it into a summer boarding-house." Town of Shelburne. Chap. CVII, p. 873.

"After good roads were built and the teaming from the upper part of the country passed this way, Shelburne became a lively place. Three taverns found plenty of custom, besides occasional company at Barker Burbank's and Capt. Evans's. John Burbank's tavern was a long, low, unpainted house, the sign hung on a post at the west end. Like all public places at that time, an open bar was kept where liquor sold for three cents a glass. John Cheadle's, near Moses Rock, was a two-story house, painted red with white trimming. George Green's, at the village, was a stage

station and postoffice, and the best tavern between Lancaster and Portland. A huge pine ball hung out from the ridge-pole, and on it in black letters was "George Green, 1817." Hon. Latimer and others drove the stage to Lancaster twice a week. In the fall of 1845 Randall Pinkham made his first trip in the employ of Barker Burbank. He drove two horses, one forward of the other, or a single wagon.

"In the spring of 1851 Enoch Hubbard built a bridge across the river from the Great Rocks, but owing to some defect it did not stand. Nothing daunted by his failure, the next spring Mr. Hubbard built again, and petitioned the Selectmen for a road. It was refused, not from any particular fault in the bridge, but because many wanted it further down the river at Gates's or Green's. But people found it much more convenient than the ferry; and at last the county commissioners came down and laid out the dugway. The natives called it the Great River bridge, but it was rechristened Lead-mine bridge by city visitors. It did good service for fifteen years. The next one was built by the town; Merrill Head, Caleb Gates, and Joshua Evans building committee. An abutment of stone was put in by Moses Mason in place of the old log one, and a bridge built under the direction of Nathan Mason. This was blown down in November, 1870, and re-built the following

winter by Enoch Hubbard and John Howell.^x
 "The building of the Grand Trunk railway through Shelburne began in 1851. Upon its completion, Jefferson Hubbard [= Thomas Jefferson Hubbard] was appointed station agent, which position he held until his death in 1877." Town of Shelburne, Chap. CVII, p. 879-880.

"Dr. Oliver Howe was a student of Dr. John Grover, and came here when quite a young man. He married Esther Burbank, with the house now known as the Winthrop House, and is the only physician who ever lived in Shelburne for any length of time. He died in 1860. Dr. Howe was a man of tall, erect form, graceful in appearance, affable in speech, and a perfect gentleman of the old school." [See Town, pp. 22, 1906.]
 Town of Shelburne - Chap. CVII, p. 875.

* This bridge was replaced by the present suspension bridge about 1894. See C. E. Philbrook.

"The roads naturally run along as near the intervals as possible, and no material change has ever been made. Longer ago than the 'oldest inhabitant' can remember, a rope-ferry ran across from Mantua Green's interval [this is the old green place where the road turns to Shelburne bridge]. Alfred Carlton kept a large boat that was sculled across, and later, Enoch Hubbard put in a rope-ferry against his interval. The road came up from

the river just below Moses Wilson's."

Town of Shelburne. Chapt. CVIII. p. 828.

"On the south side of the valley at the 'village' is the long-established hostelry The Winterp House, the 'hotel' of the town. During its existence many distinguished people have been its guests, and become satisfied with its neat, airy rooms, its quiet, unobtrusive service and well-cooked meals. Charles C. Hebbard, the proprietor, is also the postmaster. A bell is baying in the room, and when mail is to be called for, the postmaster or assistant is speedily brought by ringing it.

"Side by side with the Winterp is Elias J. Morse's Mountain Cottage, a summer house very much valued by sojourners here."

Town of Shelburne. Chapt. CIX. p 885.

"Lead Mine.—About 1820 Amos Peabody discovered fine specimens of galena on Great, or as later called, Lead-mine brook. Shafts were sunk in 1845 and 1846, and a rich deposit found. Considerable capital was invested, and mining was conducted for some years and abandoned.

In 1856 another short-lived attempt was made to work the mine. In 1879 and 1880 a stock company composed with one exception of Portland men, commenced operations, expended some money, and finally abandoned work. A specimen, nearly of cubical form, weighing 2,400 pounds, was taken from the

mine and exhibited in London, England, in 1851,
attracting much attention."

Town of Shelburne. Chap. CIX, p. 885.

"Betsey Messer, daughter of Stephen Messer [first permanent settler of Gorham], married Thomas Hubbard and lived at Ludover, Dracut and Bradford, Mass., before they came to Shelburne. Mrs. Hubbard rode from Massachusetts on horseback. They reared a large family of children. Afterwards they lived on the farm now owned by John Head, and finally settled near the top of what is now known as the Great Hill. Of their children . . . Jefferson [Thomas Jefferson] married a daughter of George Green, and for twenty-five years was station agent of the G. T. R. at Shelburne. No other proof is needed of his honesty and fidelity -"

Town of Shelburne - Chap. CVII, p. 872-873.

"The town was granted to Mass Wentworth and six others, and was surveyed in 1771. In 1820, when it was incorporated, the population was 230. In 1859 it was 480, but after the building of the Grand Trunk railway, and the establishment of the machine-shops and lumber-mills at Gorham, the younger people left moving away, till by the last census the population is only 252.

"This first original grant of Shelburne was made in 1768; but, as on a survey there was not found habitable land enough to allow the proprietors to comply with the provisions of the charter, a second grant was made,

which included the present territory of Gorham.
 ... This second grant was nominally signed by
 Gov. John Wentworth, November 21, 1771, but
 was really not issued or recorded until January
 14, 1771."

Town of Shelburne. Chap. CVI. p. 870.

"On the lawn back of the house [home of Judge Robert Ingalls Burbank, on the fourth side of the Androscoggin River], among other attractions, stands the stone settle formed in blasting 'Granny Stalbird's' rock into railroad underpinning, and rescued by the Judge from destruction * . . .
[Footnote] * A history of this remarkable woman is given in Jefferson - While quite aged she was called on a mission of healing to a sick woman in Shelburne. Overtaken by night and a terrible storm of wind and rain, she could not keep the road, and drove her horse under a projection of granite which jutted from a ledge by the roadside. Here the brave woman held 'watch and ward' until the afternoon of the next day, before the storm abated. From that memorable day Granny Stalbird's rock has preserved her memory and remembrance of her kindly deed."

Town of Shelburne - Chap. CIX. p. 884.

"Neare to us, and close to the river, is thickly wooded Wintertop, with the great, smooth granite ledge on its side, up which Moses Ingalls once had the temerity to climb. The ledge looks much like a very steep barn roof, a hundred feet high, and

smooth as glass. Gold Moses glided over it like a bird; and for his courage was presented with a farm, so the story goes,"
Town of Shelburne, Chap CVI, p. 868.

The Barbush house has rather recently burned down and C. E. Philbrick is going to have the "Granny Stalbird" settle. Oct. 12, 1806

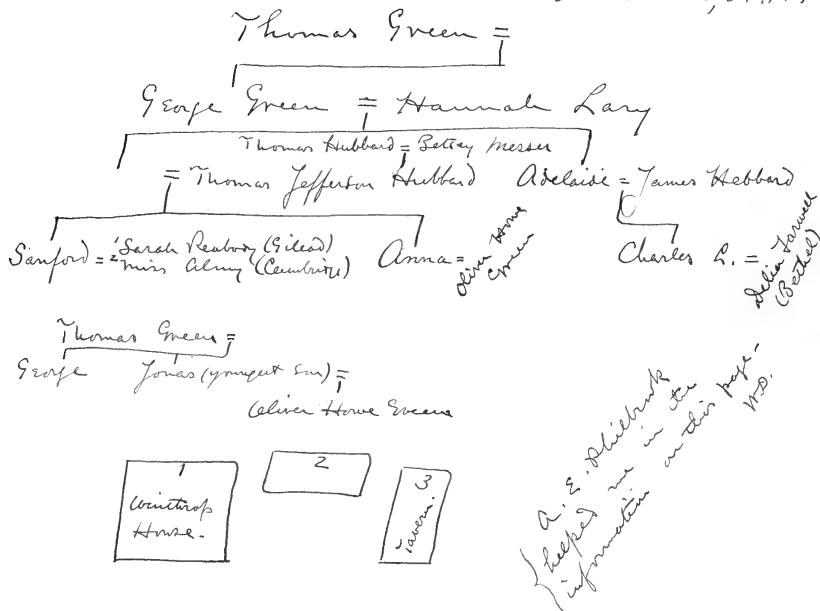

"The second woman was Deborah Vicker [the first charter of Jefferson, called Dartmouth at the time, was granted in 1765], who came from Portsmouth and succeeded Nancy as cook for Col. Whipple. She lived here eighteen months before she saw a white woman. She brought with her the first Bible in the town, for which she paid ten weeks' work, at fifty cents a week. Her strong mind, energetic will, and remarkable physical endurance gave her immense influence among the Indians and settlers of a broad extent of territory. Tradition tells us that she made the first maple sugar of the settlement, in what is now John A. Hicks's sugar orchard. Col. Whipple paid her over a year's wages in depreciated continental currency which he knew to be nearly valueless. When she learned of the character of the pay, she quietly waited until the Colonel came again from Portsmouth when she remonstrated with him in such a forcible manner that he gave her a choice of any unsold fifty acres in the town in addition to what she had been paid. She chose the lower half of lot No. 10,

range 6. In the deed made by Col. Whipple, December 10, 1797, the consideration is given as 'one dollar duly and truly in hand paid before the delivery thereof, and the love & care to the said Deborah Vickeri'. She at once employed Benjamin Hicks to fell some trees and begin a clearing. Returning to Portsmouth in a few months, she married Richard Stalbird, and the next spring came to Jefferson. Mr. Stalbird thought this land too rocky, and exchanged it with Col. Whipple for the upper half of the lot. Here Mr. & Mrs. Stalbird settled and made their life residence. In later years she added to her natural great skill in nursing a knowledge of Indian remedies, and travelled, an angel of mercy, through northern New Hampshire, braving all kinds of dangers to relieve suffering. She was welcomed everywhere as "Trading Stalbird".
 Town of Jefferson - Chap. XXXIII, p. 408-409.

These extracts were made by me at the Philbrick Farm in October, 1806.

11.

St. Albans, Vt.,

1. Once for private residence of Dr. Oliver Howe Green. It passed from him successively to Oliver Howe Green, James Hubbard & Charles C. Hubbard, who all used it for a boarding house. I was at this house in 1866 when Oliver Howe Green owned it.
2. Owned successively by T. Jefferson Hubbard, O. H. Green & Silas J. Morse.
3. Built by George Green. Passed to Mrs. Hubbard, then to O. H. Green, then to Silas J. Morse. The last two used it in a boarding house. In 1877, I was at this house, ^{reputedly by Hammah Green}. I was in one of these houses at different times between 1866 and 1877 but I cannot remember the facts. In 1877 I ate my meals at the Winthrop House under O. H. Green.

These three buildings were entirely destroyed by fire at about 11 AM on May 23, 1906. The fire started in the kitchen of the Winthrop House.

Gentle Jane -

Gentle Jane whizzed through the town,
Running many people down;
Still she gave her car but praise,
Said: "It has such killing ways."
[Carolyn Wells.

Last week, Tuesday, Gentle Jane
Met a passing railroad train;
"Good afternoon," she sweetly said,
But the blamed train cut her dead.
[Yale Record.

Scorching down the golden streets,
Jane strikes every soul she meets;
When she "honks" the spirits jump.
Thinking it is Gabriel's trump.
[Cleveland Leader.

Man, your wits are all at sea,
Heaven is not for such as she;
Jane went down below and got
Hers for scorching, good and hot.

TO THE MEMORY OF A VALUED SERVANT
ELLEN J. BRADLEY

Died September 4th, 1906.

Having recently lost an old and loved servant, I feel it right to make a brief record of the qualities that for so long have endeared her to us all. For twenty-five years she was with me, and grew into my household insensibly, as one of its loved occupants. She was an old-time servant who felt it a privilege to serve and never, even in positions of confidence and trust, failed in the deepest respect. To me her death is a personal loss; it has left the memory of her never-failing care of my family in sickness and her cheerful interest in the everyday events of life.

LUCY W. DEXTER,
76 Sparks St., Cambridge.

'Be Dine' Cambridge, Mass.

1906
Dec. 19

We had our first Be Dine this evening Bill Brewster gave the dinner at Mrs. Scudder's, 17 Buckingham St., where he & Mrs. Brewster are living at present.

The dinner was most successful. All the eleven members were present and the table was very tastily arranged, with twigs of holly and star red berries daintily arranged. In the center of the table was a glass vessel containing five wallaby mice that performed for us during the meal, whirling round and round at times with astonishing speed. I noticed them whirling in both directions, but did not observe that any mouse whirled in both directions. At each plate was a very beautiful card with appropriate verse, made by Mrs. Bill Sloane. My verse was

Some say that even jaunt that season comes
Wherin our Savian's birth is celebrated,
This bird of downy singeth all night long.
A picture of a bird is woven into the ~~card~~
This is from Hamlet -

Our meat course consisted of a Wild Turkey cooked to perfection. It was a treat.

During the meal the maid came in at intervals with one or two telegrams presumably just come. They were written on telephone sheets and we read them aloud. They hit each member perfectly. I copied them all and produce them here:-

2nd Jan. 448, 449 }
I sent Marion Lord " "
Rogers " "
2nd Jan. 448, 449

I have been reading Brewster's book with much interest. Its local flavor is delightful. I cannot help wondering, however, if some of the persons so well advertised therein by frequent mention of their names and tributes to their veracity, paid anything for the same.

With best regards to Mrs. Dean. Sincerely always

Edition of July 1898.

DESCRIPTION OF THE TOPOGRAPHIC MAP OF THE UNITED STATES.

The United States Geological Survey is making a topographic map of the United States. This work has been in progress since 1882, and about one-fifth of the area of the country, including Alaska, has been mapped. The mapped areas are widely scattered, nearly every State being represented, as shown on the progress map accompanying each annual report of the Director.

This great map is being published in atlas sheets of convenient size, which are bounded by parallels and meridians. The four-cornered division of land corresponding to an atlas sheet is called a *quadrangle* (a word used as specifically as *section* is in the surveys of the public lands). The sheets are of approximately the same size: the paper dimensions are $21\frac{1}{4}$ by $18\frac{1}{2}$ inches; the map occupies about $17\frac{1}{2}$ inches of height and $11\frac{1}{2}$ to 16 inches of width, the latter varying with latitude. Three scales, however, are employed. The largest scale is 1:62,500, or very nearly one mile to one inch; i. e., one linear mile on the ground is represented by one linear inch on the map. This scale is used for the thickly settled or industrially important parts of the country. For the greater part of the country an intermediate scale of 1:125,000, or about two miles to one inch, is employed. A third and still smaller scale of 1:250,000, or about four miles to one inch, has been used in the desert regions of the far West. A few special maps on larger scales are made of limited areas in mining districts. The sheets on the largest scale cover 15° of latitude by 15° of longitude; those on the intermediate scale, $30'$ of latitude by $30'$ of longitude; and those on the smallest scale, 1° of latitude by 1° of longitude.

The features shown on this map may, for convenience, be classed in three groups: (1) *water*, including seas, lakes, ponds, rivers and other streams, canals, swamps, etc.; (2) *relief*, including mountains, hills, valleys, cliffs, etc.; (3) *culture*, i. e., the works of man, such as towns, cities, roads, railroads, boundaries, etc. The conventional signs used for most of these features are shown and explained in the marginal columns herewith.

All water features are shown in blue, the smaller streams and canals in full blue lines, and the larger streams, lakes, and the sea by blue water-lining. Certain streams, however, which flow during only a part of the year, their beds being dry at other times, are shown, not by full lines, but by lines of dots. Ponds which are dry during a part of the year are shown by oblique parallel lines. Salt-water marshes are shown by horizontal ruling interspersed with tufts of blue, and fresh-water marshes and swamps by blue tufts with broken horizontal lines.

The land features of the relief, usually represented on maps by shading of some sort, with pen or brush, are here shown by contour lines in brown. Each contour passes through those points which have the same altitude. If one follows a contour on the ground one will go neither uphill nor downhill, but on a level.

By the use of contours not only are the shapes

of the plains, hills, and mountains shown, but also the elevations. The line of the sea-coast itself is a contour line, the datum or zero of elevation being mean sea-level. The contour line at, say, 20 feet above sea-level is the line that would be the sea-coast if the sea were to rise or the land to sink 20 feet. Such a line runs back up the valleys and forward around the points of hills and spurs. On a gentle slope this contour line is far from the present coast line, while on a steep slope it is near it. Thus a succession of these contour lines far apart on the map indicates a gentle slope; if close together, a steep slope; and if they run together in one line, as if each contour were vertically under the one above it, they indicate a cliff. In many parts of the country are depressions or hollows with no outlets. The contours of course surround these, just as they surround hills. Those small hollows known as sinks are usually indicated by hachures, or short dashes, on the inside of the curve. Certain contours, usually every fifth one, are accompanied by numbers stating elevation above sea-level. Many other heights, instrumentally determined, are also given, the number in each case being placed in close proximity to the point to which it applies.

The works of man are shown in black, in which color all lettering also is printed. Boundaries, such as State, county, city, land-grant, reservation, etc., are shown by broken lines of different kinds and weights. Cities are indicated by black blocks, representing the built-up portions, and country houses by small black squares. Roads are shown by fine double lines (full for the better roads, dotted for the inferior ones), trails by single dotted lines, and railroads by full black lines with cross lines. Other cultural features are represented by conventions easily understood.

The sheets composing the topographic atlas are designated by the name of a principal town or of some prominent natural feature within the district, and the names of adjoining published sheets are printed on the margins. The sheets are sold at five cents each when fewer than 100 copies are purchased, but when they are ordered in lots of 100 or more copies, whether of the same sheet or of different sheets, the price is two cents each.

The topographic map is the base on which the facts of geology and the mineral resources of a quadrangle are represented. The topographic and geologic maps of any quadrangle are finally bound together, accompanied by a description of the district, to form a folio of the Geologic Atlas of the United States. The folios are sold at twenty-five cents each, except such as are unusually comprehensive, which are priced accordingly.

Applications for the separate topographic maps or for folios of the Geologic Atlas, accompanied by the cash or by post-office money order (not postage stamps), should be addressed to—

THE DIRECTOR,
United States Geological Survey,
Washington, D. C.

October, 1897.
